HIGH ACCURACY AND HIGH RIGIDITY BALLSCREW ACTUATOR

SG, SE, SC SERIES

CONTENTS

BALLSCREW ACTUATORS

A ballscrew actuator of KURODA is a compact single-axis unit consisting of a ball screw and a slide guide. With its slide block set in U-guide rail, the actuator has achieved low-profile design and compact shape, making it possible to considerably reduce necessary space as compared with the usual table type structure. Despite of its compact structure, the actuator with U-guide rail shows high rigidity against bending moment and deflection, and it can be applied to a structure supported by one end. The linear motion unit, which is gothic arched and in 4 points-contact structure, makes it possible to deliver high precision and high rigidity.

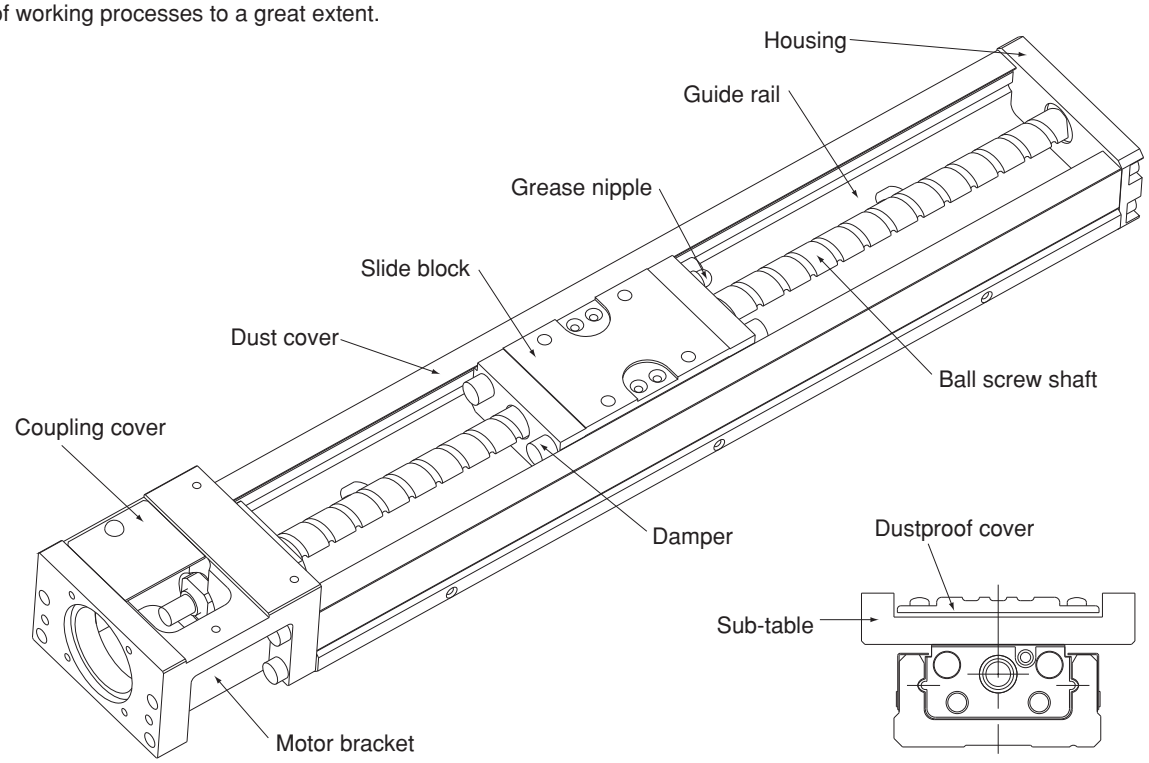
(Note 1) The above table shows precision information on repeated positioning accuracy in particular, as an example.
Performance of actuators may be different from the values shown above, depending on applied options and usage.
For other precision information, refer to description pages for each series.

(Note 2) SC series is a full-cover version of SE series ballscrew actuators.
For more information, refer to front matter 5, pages 6 and 89 to 105.

FEATURES OF SG/SE SERIES

■ No necessity for adjustment

Ball screw and slide guide are integrated in ballscrew actuator, eliminating the need for complicated fine adjustment and reducing the number of working processes to a great extent.

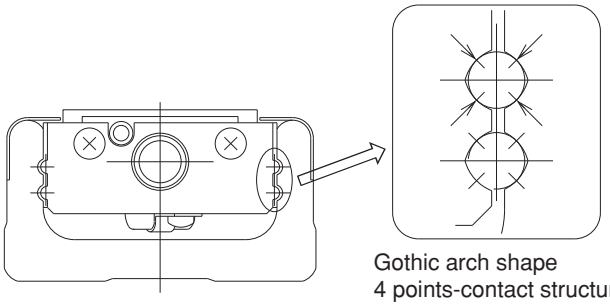


■ High rigidity

With U-guide rail, rigidity of ballscrew actuator has remarkably improved despite of its compact structure, making it possible to be applied even to a structure supported at only one end.

■ High accuracy

Linear motion unit uses "4 or 2 Ballway of 4 points-contact" structure to assure high rigidity. Guide rail, slide block and ball screw shaft are precisely worked, making accurate positioning possible.

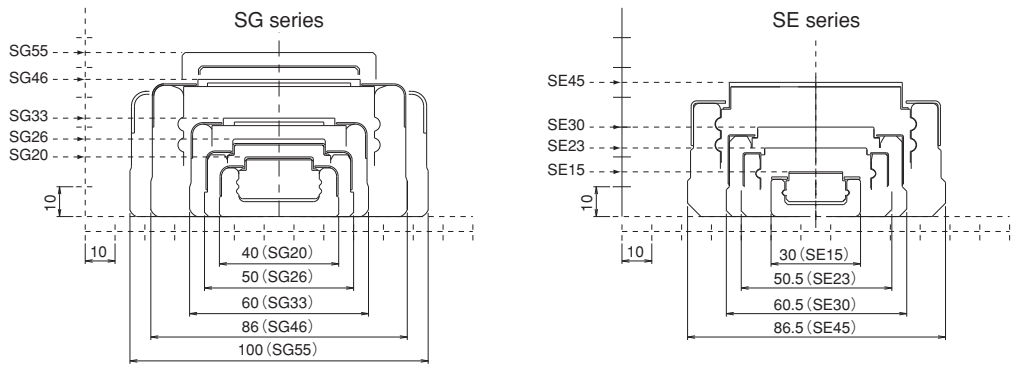


Gothic arch shape
4 points-contact structure

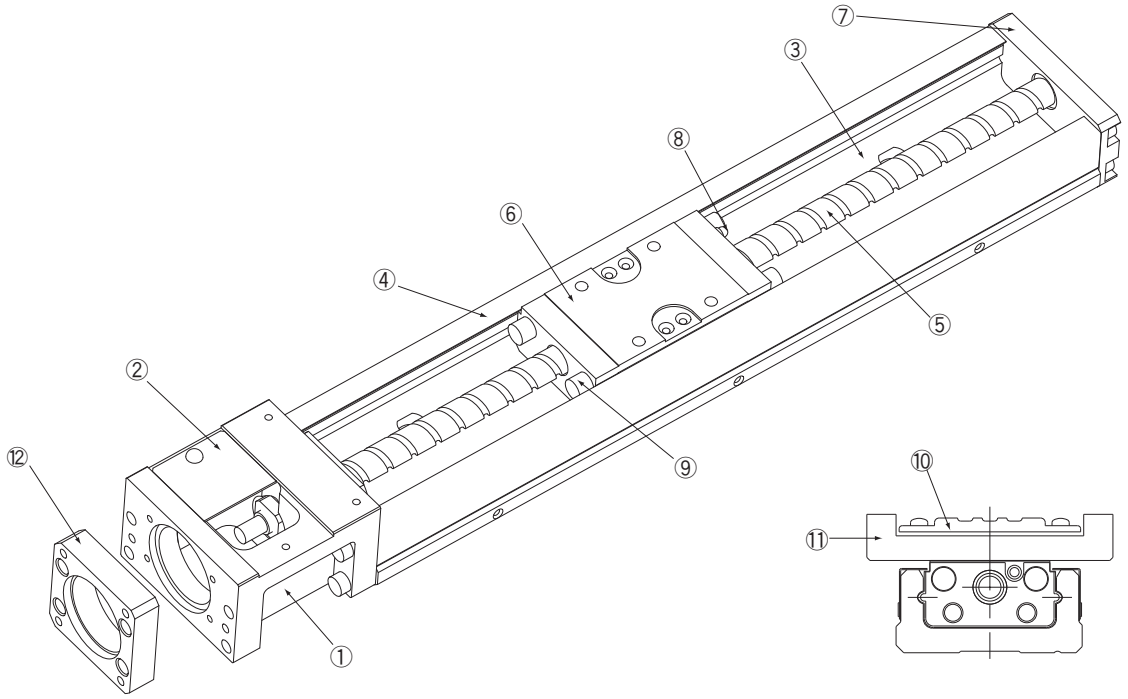
■ Space-saving

With its slide block set in U-guide rail, the actuator has achieved low-profile design and compact shape, making it possible to considerably reduce necessary space as compared with usual table type structure.

(Unit: mm)

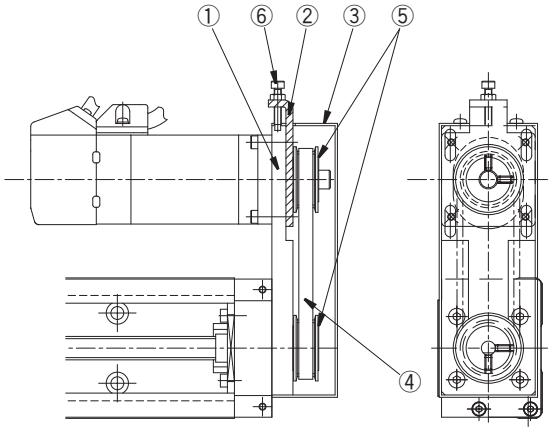


KEY COMPONENTS AND MATERIALS OF SG AND SE SERIES



No.	Part name	Material	Remarks
①	Motor bracket	Aluminum alloy	Anodized treatment or baking finish
②	Coupling cover	Aluminum alloy	Anodized treatment
③	Guide rail	Stainless steel (SG20, SG26) Carbon steel (SG33, SG46, SG55, SE15, SE23, SE30, SE45)	Black coating (Note 1)
④	Dust cover	Aluminum alloy	Anodized treatment
⑤	Ball screw shaft	Chromium-molybdenum steel (SG series) Carbon steel (SE series)	
⑥	Slide block	Chromium-molybdenum steel	
⑦	Housing	Aluminum alloy	Anodized treatment or baking finish
⑧	Grease nipple	Stainless steel	
⑨	Damper (Note 2)	Synthetic rubber	
⑩	Dustproof cover	Aluminum alloy	Anodized treatment
⑪	Sub-table	Aluminum alloy	Anodized treatment
⑫	Intermediate flange	Aluminum alloy (SG20, SG26, SE15, SE23, SE30, SE45) Carbon steel (SG33, SG46, SG55)	Anodized treatment Black coating

(Note 1) Guide rails made from stainless steel are not surface-treated.
(Note 2) Damper position of SG series is different from SE series. For more information, refer to dimensions of each series.
(Note 3) Stainless steel is used for bolts and machine screws to joint components of actuator.



No.	Part name	Material	Remarks
①	Motor mounting plate	Rolled steel	Black coating
②	Tension plate	Stainless steel	
③	Pulley cover	Stainless steel (SG series) Cold-rolled steel plate (SE/SC series)	Anti corrosive black coating (Note 4)
④	Timing belt	Resin	
⑤	Timing pulley	Aluminum alloy	
⑥	Tension bolt	Stainless steel	

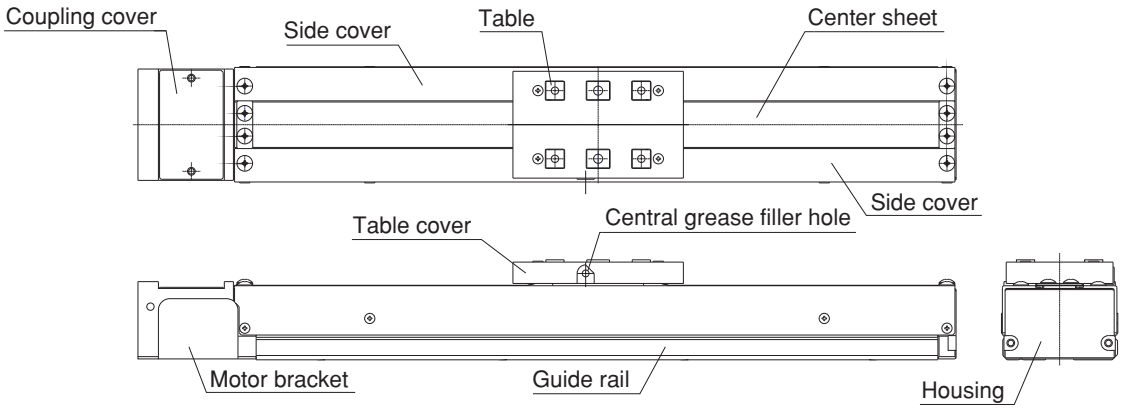
(Note 4) Anti corrosive black coating of pulley cover applies to SE and SC series.

KURODA JENATEC

FEATURES OF SC SERIES (FULL-COVER TYPE)

Full-cover type SC series, built on KURODA SE series, has remarkably improved its dust-preventive performance.

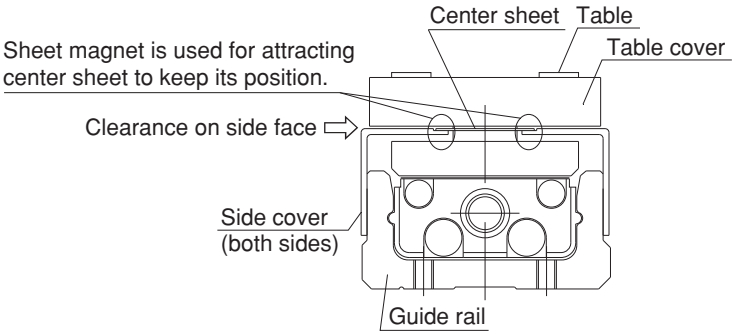
Structure



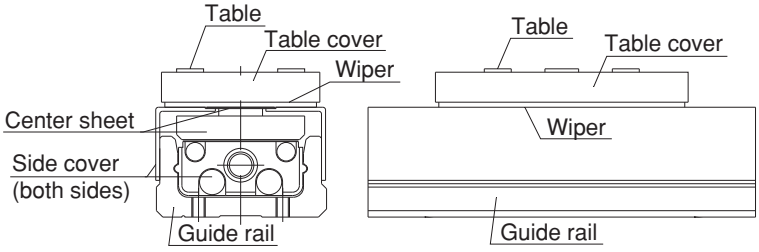
■ Remarkably improved dust prevention!

Compared to SE series with dustproof cover, dust prevention has been remarkably improved through making clearance on side face of actuator as narrow as it can be and effectively applying new center sheet designed to straddle the tables, so as to prevent entry of dust.

Center sheet is a flexible stainless sheet having a structure to keep its position and to prevent it from being lifted.



For further improved dust prevention, a wiper can be optionally equipped so that a gap between bottom of table cover and side cover/center sheet is filled.



■ Down-sized body meeting space-saving needs!

SC series has full-cover type body with the same width and dimensions as SE series' guide rail.
Replacing SE series with the full-cover type SC series requires just the same mounting space (width) as SE series (Note that mounting height is different).

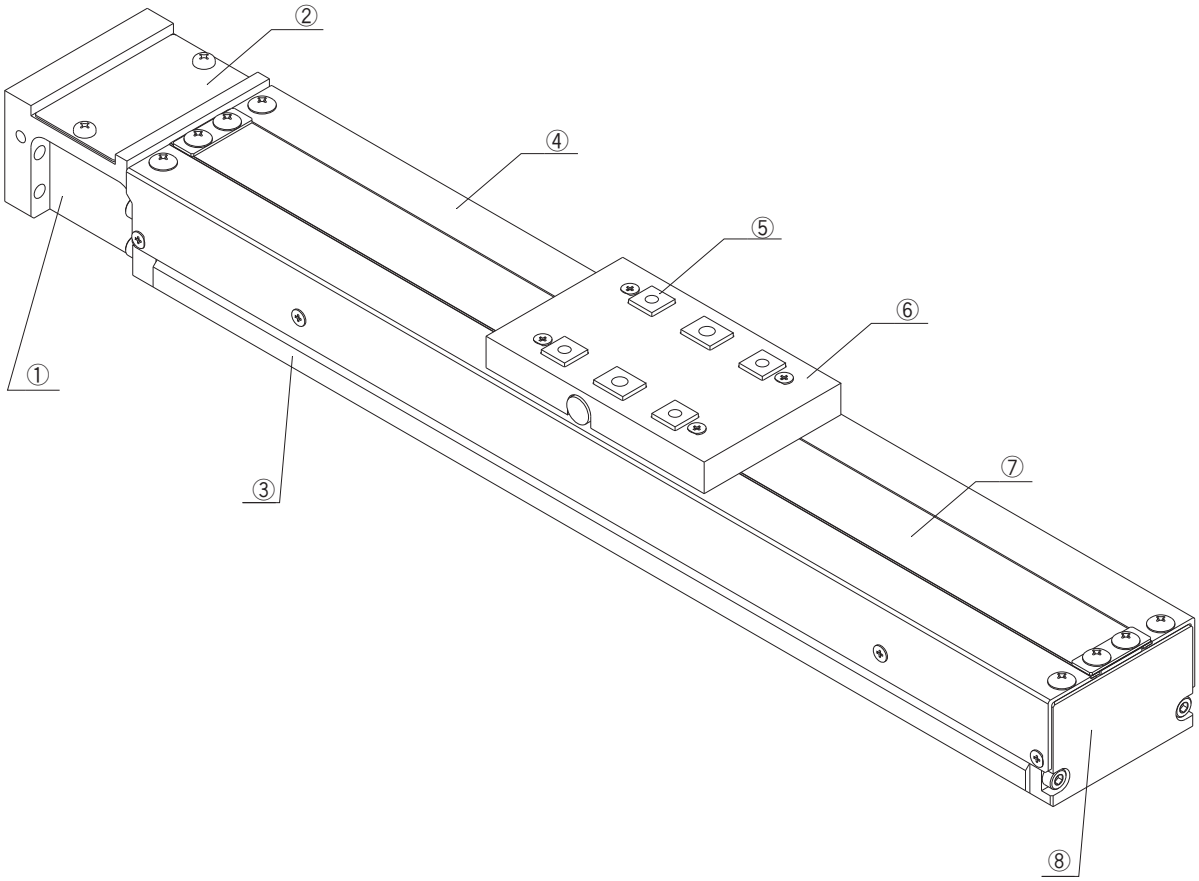
■ Easy maintenance!

In order for more efficient grease-up work, which is usually found cumbersome, a central grease filler hole is provided on the side face of the table, as standard equipment of SC series.
Supplying grease to ball screws and guide parts can be completed at a time through the central grease filler hole. (A plug is equipped with standard spec. model).
Grease nipple to be attached to grease filler hole is available as an option. (For more information, refer to pages 96, 100, and 104.)

■ Guide with remarkable rigidity!

Having steel U-guide rails similar to SG/SE series, SC series shows high rigidity despite of its compact structure, and it can be applied to a structure supported by one end. (For more information, refer to front matter 11.)

KEY COMPONENTS AND MATERIALS OF SC SERIES



No.	Part name	Material	Remarks
①	Motor bracket	Aluminum alloy	Anodized treatment
②	Coupling cover	Aluminum alloy	Anodized treatment
③	Guide rail	Carbon steel	Black coating
④	Side cover	Aluminum alloy	Anodized treatment
⑤	Table	Aluminum alloy	Anodized treatment
⑥	Table cover	Synthetic resin	
⑦	Center sheet	Stainless steel	
⑧	Housing	Aluminum alloy	Anodized treatment

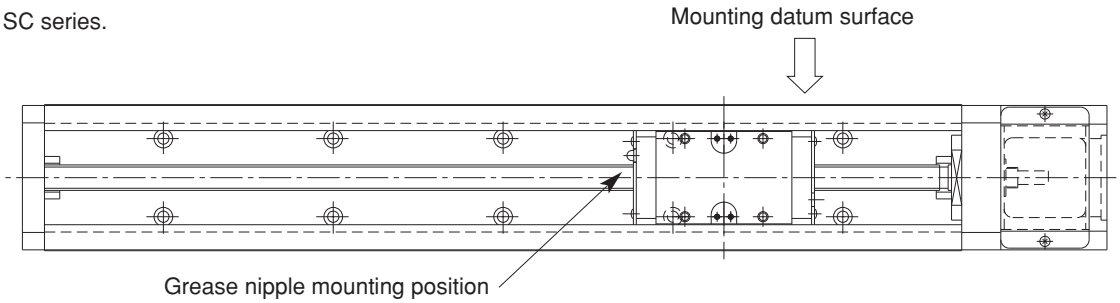
(Note 1) Ball screws used for SC series have the same specifications as SE series.
(Note 2) Stainless steel is used for bolts and screws to joint components of actuator.

VARIATIONS OF SLIDE BLOCK

Two types of actuator with long block and short block are available. Additional types with either 2 long blocks or 2 short blocks are also available. Appropriate type can be selected from the variations according to your purpose of use.

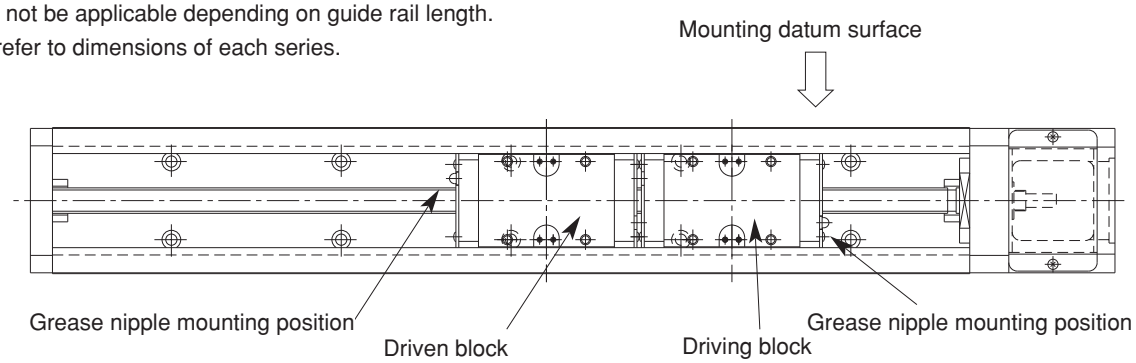
● With 1 long block: A

Applied to SG, SE, and SC series.



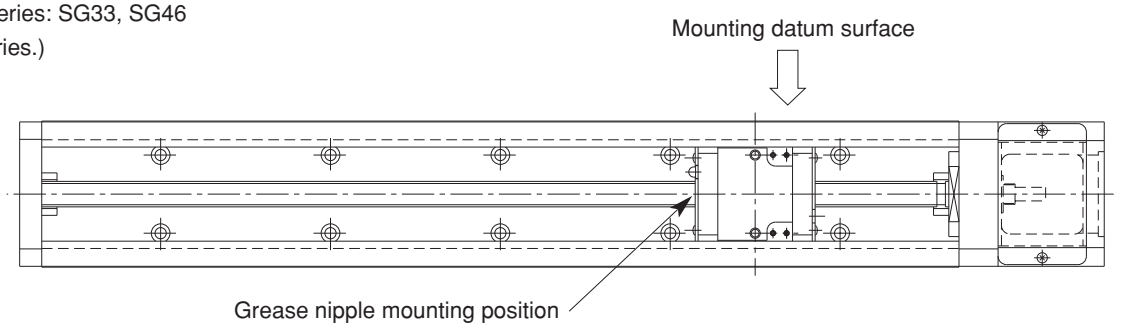
● With 2 long blocks: B

Applied to SG and SE series. (Not available for SC series.)
This configuration may not be applicable depending on guide rail length.
For more information, refer to dimensions of each series.



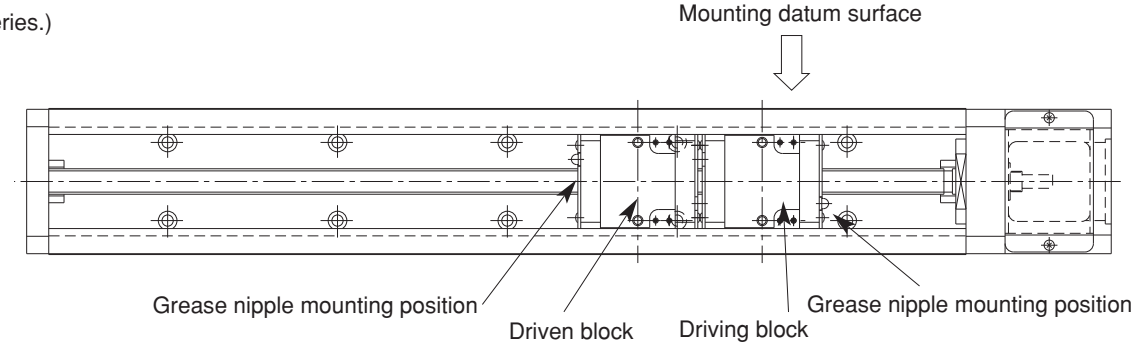
● With 1 short block: C

Applicable size in SE series: SE45
Applicable size in SG series: SG33, SG46
(Not available in SC series.)



● With 2 short blocks: D

Applicable size in SE series: SE45
Applicable size in SG series: SG33, SG46
(Not available in SC series.)



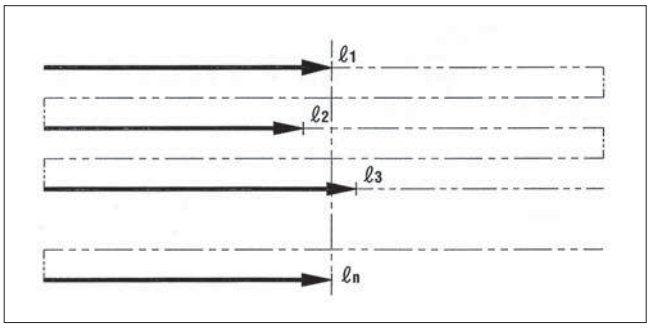
SUMMARY OF ACCURACY INDICATORS

Performance of ballscrew actuators are shown using various accuracy indicators described below.
For details in tolerance of the accuracy indicators, refer to table of performance (accuracy) information for each series.

● Repeated positioning accuracy

Repeat positioning of slide block in the same direction 7 times, measure stop position of slide block and halve maximum difference between obtained readings. Perform this measurement at the center and both ends of travel distance. Maximum value among obtained value is used as measured value.

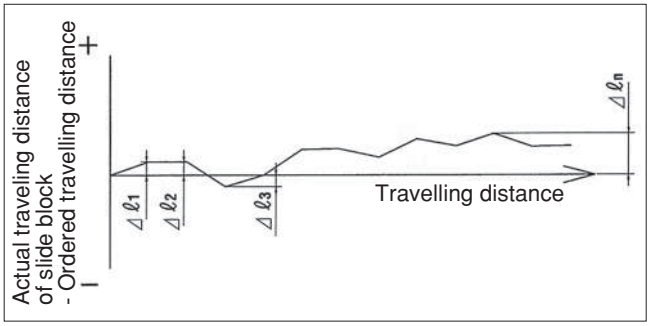
Repeated positioning accuracy
＝±1/2 ((maximum value of ℓn) - (minimum value of ℓn))



● Positioning accuracy

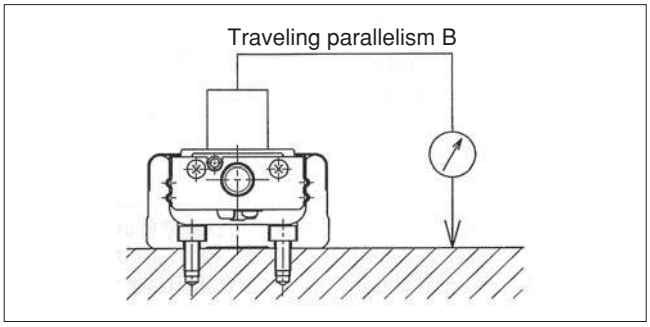
Position slide block properly in a fixed direction and use the obtained position as datum point. Perform positioning of slide block in the same direction and measure difference between actual traveling distance of slide block from datum point and distance ordered to be traveled from datum point. Perform this measurement throughout stroke range and use maximum value.

Positioning accuracy＝(Δ ℓn) max



● Traveling parallelism B

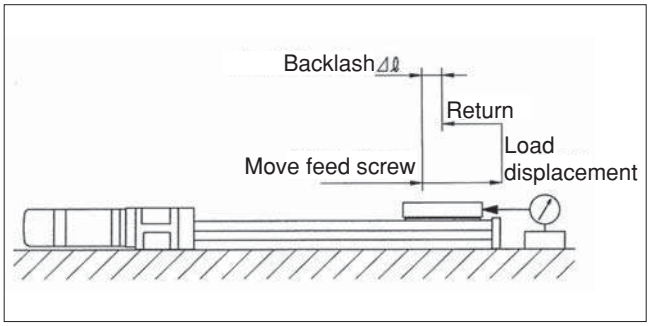
Fix indicator at the center of slide block and apply it to surface plate equipped with guide rail. Move slide block throughout traveling distance and use maximum distance among readings of test indicator as measured value.



● Backlash

Move slide block by rotating ball screw shaft and read test indicator when slide block is slightly moved and use its reading as reference value. Move slide block from this state in the same direction by pressuring prescribed load and measure difference between reading of test indicator with load removed and reference value. Perform this measurement at the center and both ends of traveling distance and use maximum value as a measured value.

Backlash＝Δℓ



⚠

・Firmly tighten the fixed part and connection of the ballscrew actuator.
Improper mounting of the body may adversely affect safety and accuracy depends on the circumstances.

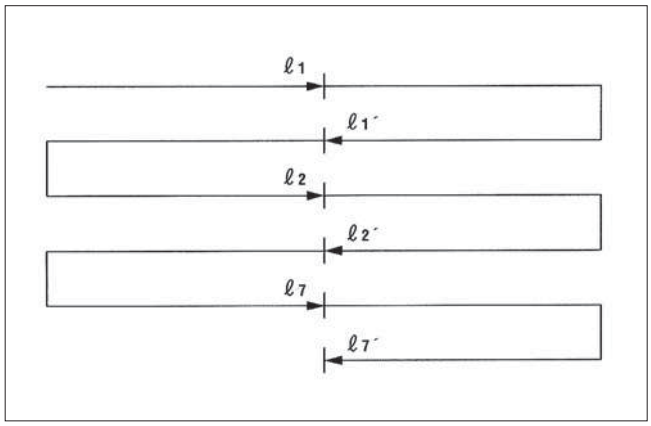
KURODA JENATEC

REFERENCE DATA ON ACCURACY

ACCURACY OF UNIT PRODUCT

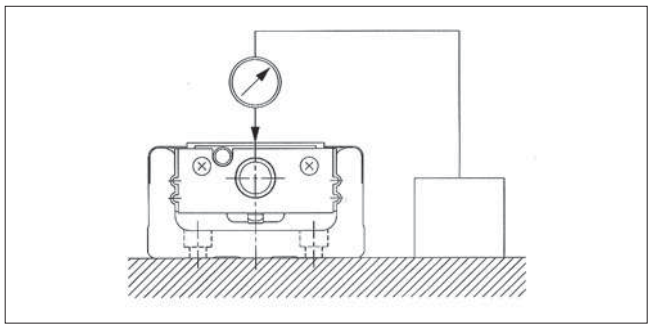
● Lost Motion

Perform positioning in a positive (or negative) direction and measure the position (ℓ_1). Move the slide block in the same direction and perform positioning in a negative (or positive) direction and measure the position (ℓ_1'). Move it further in the same direction and thereafter repeat the procedure in the positive and negative directions seven times each. Obtain the differences of the average values of the stop positions. Conduct this measurement for the entire moving range and use the obtained maximum value as a measured value.

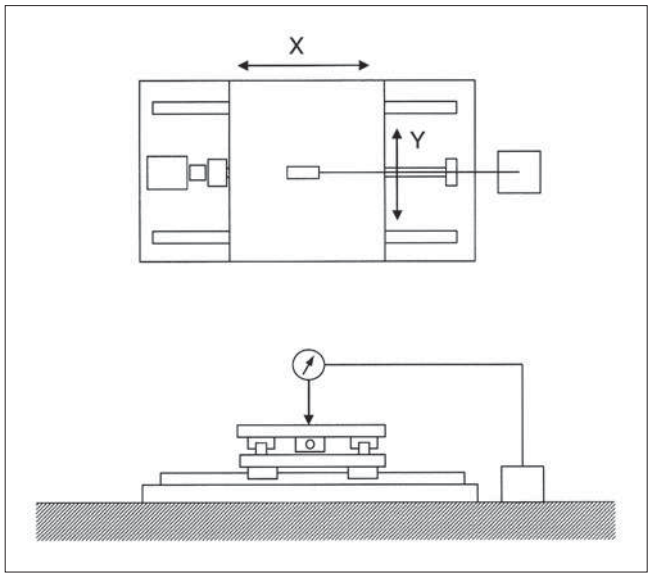


● Traveling Parallelism A

In the case of ballscrew actuators:
Set dial gauge on surface plate, fix indicator on top of slide block, obtain the maximum difference of dial gauge readings in measurable moving range in longitudinal direction of slide block. And use it as a measured value. Since the measurable range is small for ballscrew actuators, Traveling Parallelism B is used as the measurement method for all of the cases except for a few exceptions.



In the case of X-Y stages:
Set dial gauge on surface plate, fix indicator at the center of table, obtain the maximum difference of dial gauge readings in entire moving range in X-Y direction. The maximum difference is used as a measured value.

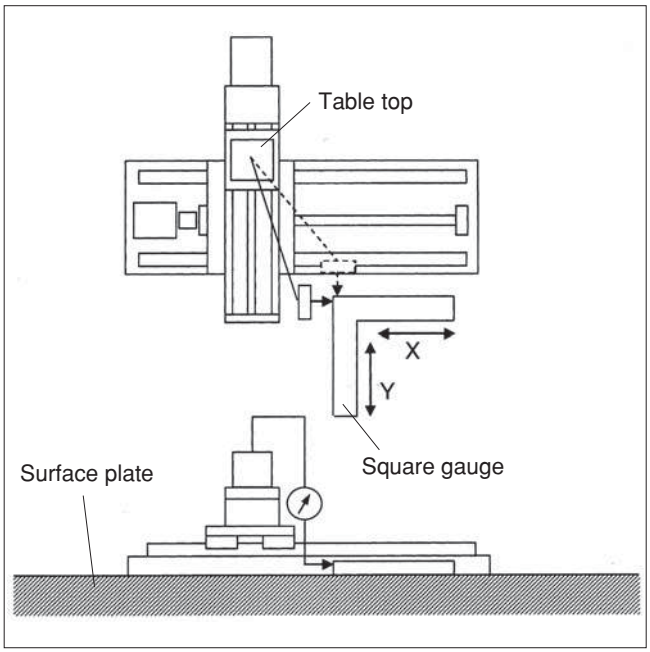


REFERENCE DATA ON ACCURACY

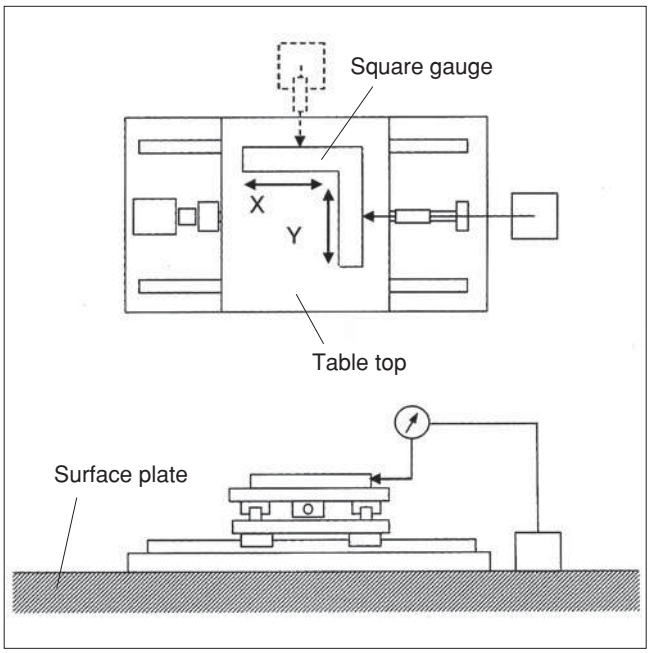
ACCURACY OF UNIT PRODUCT

● Squareness

In case squareness cannot be measured on the table top:
Set a dial gauge on the table top. On surface plate close to the table travel range, fix a square gauge in parallel to X (or Y) travel direction.
Place a fix indicator against the side of square gauge parallel to Y (or X) travel direction. The maximum reading value of the dial gauge in the entire travel range is a measured value of squareness.

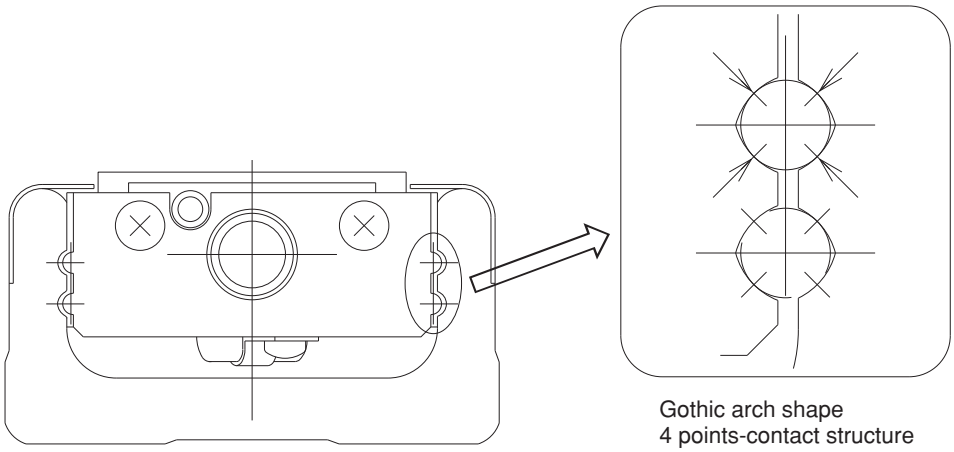


In case squareness can be measured on the table top:
Set a dial gauge on surface plate. On the table top, fix a square gauge in parallel to X (or Y) travel direction.
Place a fix indicator against the side of square gauge parallel to Y (or X) travel direction. The maximum reading value of the dial gauge in the entire travel range is a measured value of squareness.



RIGIDITY

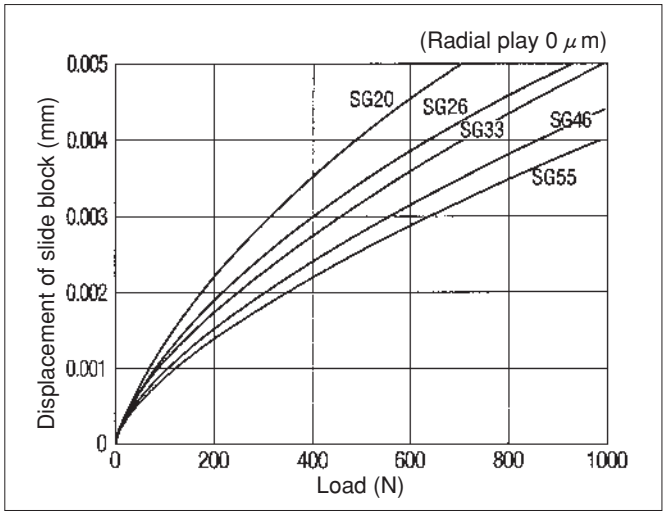
Linear motion units of SG, SE, and SC series, having gothic-arched grooves and 4 points-contact structure on guide rails and slide blocks, have attained high rigidity. Displacement by each radial load in each size with long block configuration is shown below as a reference.



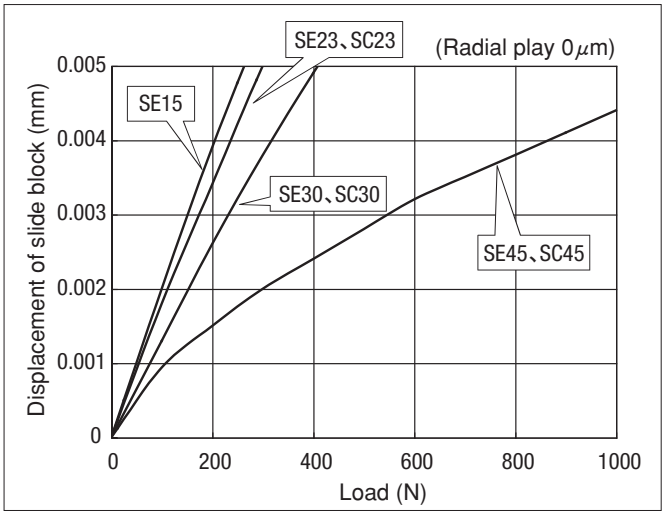
Gothic arch shape
4 points-contact structure

● Displacement of Slide block by Radial Load

SG series



SE/SC series



● Sectional Secondary Moment of Guide Rail

The following table shows sectional secondary moments of guide rails in each size.

Model No.	Sectional secondary moments (mm^4)		Mass (kg/100mm)
	I_X (X axis)	I_Y (Y axis)	
SG20	6.50×10^3	6.00×10^4	0.250
SG26	1.69×10^4	1.47×10^5	0.380
SG33	5.11×10^4	3.42×10^5	0.600
SG46	2.42×10^5	1.49×10^6	1.240
SG55	2.29×10^5	2.28×10^6	1.500
SE15	2.71×10^3	2.36×10^4	0.147
SE23, SC23	1.44×10^4	1.37×10^5	0.410
SE30, SC30	3.88×10^4	3.14×10^5	0.560
SE45, SC45	1.45×10^5	1.26×10^6	1.110

○: Option —: Not available ●: Manufactured by order

(Note 1) R0 type bracket is applied to SG series and RN type is applied to SE and SC series.
(Note 2) Full-cover type with wiper and with grease nipple is applied only to SC series.
(Note 3) Anti corrosive black coating (film thickness 1-2 μm) is provided as surface treatment.
(Note 4) Oil hole for SG and SE series is applied to the configuration with sub-table.
(Note 5) Any grease application other than standard or option grease applications will be provided on a manufactured by order basis.
(Note 6) Ballscrew actuator with motor bracket or intermediate flange configuration other than standard or option configuration will be provided on a manufactured by order basis.
(Note 7) Ballscrew actuator requiring a sensor other than option configuration or two sensors attached on both ends will be provided on a manufactured by order basis.
(Note 8) For ballscrew actuators to be provided on a manufactured by order basis, specifications will be determined after consultation with customers. Please consult KURODA after completing the Specification Data Sheet attached at the end of this catalogue.

HOW TO INTERPRET MODEL NO.

Model No.	Lead	Slide block		Guide rail length	Performance grade		Motor bracket configuration	Type of cover	Sensor		Surface treatment	Grease		Dowel pin hole
SG33	10	A	–	500	P	–	A1	C	C	–	N	N	–	PS
①	②	③		④	⑤		⑥	⑦	⑧		⑨	⑩		⑪
Model No. of Main Body							Model No. of Option							

① Model of ballscrew actuator

The 2-digits number represents height of mounting surface, from the bottom face of guide rail to top face of slide block. (For SG/SE series with dustproof cover and SC series, Model No. of the unit used as base of the body is shown.)

SG series	SG20	SG26	SG33	SG46	SG55
SE/SC series	SE15	SE/SC23	SE/SC30	SE/SC45	

② Lead of ball screw

Permissible speed varies depending on the lead. For more information, refer to dimensions of each series.

Lead	SG series					SE/SC series			
	SG20	SG26	SG33	SG46	SG55	SE15	SE/SC23	SE/SC30	SE/SC45
1mm	○					○			
2mm		○				○	○		
4mm								○	
5mm	○	○	○				○	○	○
10mm			○	○				○	○
20mm			○	○	○				○

③ Variation of slide blocks and number of blocks to be mounted

For configuration with 2 slide blocks, a driving block and driven block in combination is mounted. For more information, refer to dimensions of each series.

④ Guide rail length

For more information, refer to dimensions of each series. Please note that the guide rail length is different from overall length or maximum stroke length of actuator.

Model No.	Standard guide rail length									
SE15	100	150	200							
SE23	150	200	250	300						
SE30	150	200	300	400	500	600	700	750		
SE45	340	440	540	640	740	840	940			
SC23	150	200	250	300						
SC30	150	200	300	400	500	600	700	750		
SC45	540	640	740	840	940					
SG20	100	150	200							
SG26	150	200	250	300						
SG33	150	200	300	400	500	600*				
SG46	340	440	540	640	740	840*	940*	1040*	1140*	1240*
SG55	980	1080	1180	1280*	1380*					

・Asterisked (*) item in the above table applies only to performance grade H.
・For long rail configurations, please consult KURODA.

⑤ Performance of ballscrew actuators, including various positioning accuracy indicators and traveling parallelism

For more information on accuracy, refer to a table of accuracy information for each series.

⑥ Motor bracket configuration

Intermediate flange may be used in combination with basic configuration. For more information, refer to a table of motor bracket configurations and motor option for each series.

⑦ Type of cover

For more information, refer to dimensions of each series.

⑧ With or without sensor / type of sensor

For more information, refer to dimensions of each series.

⑨ With or without surface treatment applied on guide rails and ball screws

With standard specifications (Symbol N), only guide rails are treated with black coating (except for guide rails made from stainless steel).

⑩ Type of grease applied on slide blocks and ball screws of ballscrew actuators

With standard specifications, Multemp PS No.2 Grease (KYODO YUSHI CO., LTD.) is contained.

⑪ Dowel pin holes on guide rails and slide blocks

The column will be left blank (no symbol) if actuator is without dowel pin holes. For more information, refer to configuration drawings for each series.

FOR SAFETY USE

Be sure to read the following instructions before use.
For common instructions, refer to the text of this catalog.

The following safety precautions recommend the correct usage of our products to prevent an injury and a damage.
These precautions are classified into 3 categories : "DANGER","WARNING" and "CAUTION" according to the degree of possible injury or damage and the degree of impendence of such injury or damage.
Be sure to follow all these precautions, as they include important contents regarding safety.

DANGER	WARNING	CAUTION
Indicates an impending hazardous situation that may arise due to improper handling or operation and could result in a serious injury or death.	Indicates a potentially hazardous situation that may arise due to improper handling or operation and could result in a serious injury or death.	Indicates a potentially hazardous situation that may arise due to improper handling or operation and could result in an injury or property damage only.

Be sure to obey "Labor Safety and Sanitation Law" and other safety rules and regulations in addition to these precautions.
There is some situation that may lead to a serious result according to circumstances, even if it is mentioned in the category of "CAUTION". Be sure to follow these precautions, as they contain important matters.

WARNING

- Select a ballscrew actuator properly.
  As operating conditions for products mentioned in this catalog are diversified, the applicability of ballscrew actuator to the intended system should be determined by the total system designer or the person who determined specifications for such system after conducting an analysis and testing as necessary.
  The person who determined the applicability of the system shall be responsible for assuring the intended system performance and safety. When configuring a system, the system designer should thoroughly examine all specifications for such a system by referring to the latest product catalog and data, and also take into consideration the possibility of equipment troubles.

- The ballscrew actuator should be handled by persons who have sufficient knowledge and rich experience.
  Thoroughly read this catalog and operation manual before use.
  · Never disassemble the ballscrew actuator. Dust can enter the inside, degrading the accuracy of the module and causing an accident. When the ballscrew actuator has been disassembled from necessity, return it to our company for repair and reassembling. (In this case, repairing charges are required.)
  · When mounting a ballscrew actuator to a machine and dismounting it from machine, check that a fall prevention means has been taken and the moving part of the machine has been fixed beforehand.

- When using the ballscrew actuator in the following conditions or environments, take the proper safety measures and consult KURODA beforehand.
  · Conditions and environments other than specified and outdoor use.
  · Applications to nuclear power equipment, railroads aircraft, vehicles, medical equipment, equipment connected with food and drink, and the likes.
  · Applications which require extreme safety and will also greatly affect men and property.

- During operation, make sure to keep your hands away from either of stroke ends, where slide block moves, to prevent your finger from being caught.

- During operation, make sure to keep your hands away from screws and axis terminals of ball screw shaft, which are rotating parts, to prevent your hands from being caught.

- Pay adequate attention not to allow the actuators to be used for military purpose including for arms and weapons.

BALLSCREW ACTUATOR/COMMON INSTRUCTIONS

Be sure to read the following instructions before use.
Also refer to "FOR SAFETY USE".

DESIGN

⚠ WARNING

- **Especially when there is the possibility that the ballscrew actuator is dangerous to the human body, provide it with a protective cover.**
  When there is the possibility that the load and the moving part of the ballscrew actuator are dangerous to the human body, design the structure to prevent the human body from touching such load and moving part directly.
- **Firmly tighten the fixed part and connection of the ballscrew actuator.Improper mounting of the body may adversely affect safety and accuracy according to circumstances.**
- **Take into consideration the behavior of the ballscrew actuator in an emergency.**
  When the machine is immediately stopped in an emergency by a person or by a safety device in case of power failure or system trouble, the motion of the module can injure the human body and can damage the machine. So design the machine to prevent an injury to the human body and a damage to the machine.

SELECTION

⚠ WARNING

- **Check specifications.**
  Be sure to use the ballscrew actuator within the given specifications.
- **When selecting a rigid type as coupling for connecting a motor, consult KURODA.**

MOUNTING

⚠ CAUTION

- **Be careful not to dent and flow the body and the mounting surface of the table, side cover, and center sheet.**
  Such dent or flaw will degrade parallelism of mounting surface, resulting in rattling of the guide and increased slide resistance. Note that, since the center sheet of SC series are very thin, such dent or flaw may ruin its dust preventive capability or lead to damage of the sheet function.
- **When connecting the ballscrew actuator to a load with an external support or guide, do so in accordance with a proper connecting method and perform centering satisfactorily.**
- **When mounting a load, do not apply an excessive shock or moment.**
  If the ballscrew actuator receives external force exceeding the permissible moment, the guide will loosen and sliding resistance will increase.
- **Do not start the system until it is confirmed that the ballscrew actuator works properly.**
  After mounting the ballscrew actuator, perform an appropriate functional test and make sure that it is correctly mounted and works safely without fail before starting the system.
- **Although corners of components, such as motor bracket, housing, side cover, and center sheet, are beveled, pay enough attention not to hurt yourself when handling them.**

OPERATING ENVIRONMENT

⚠ DANGER

- **Do not use the ballscrew actuator in a place where an explosive atmosphere exists.**

⚠ WARNING

- **Do not use the ballscrew actuator in an atmosphere containing corrosive gases, chemicals, seawater, water and vapor and in a place where it can be stained with such matters.**
- **When using the ballscrew actuator in a place where it is exposed to dust, cuttings, spatters, etc., fit a protective cover or other protector.**
- **Do not use the ballscrew actuator in a vibratory or shockable place ; otherwise causing a bad condition or breakdown.**
  When using the ballscrew actuator in such an environment, consult KURODA.

⚠ CAUTION

- **Since the SC series is equipped with sheet magnet on side covers for attracting center sheet to keep its position, be careful not to have the magnet contaminated with iron power or metallic fragments.**

LUBRICANTS

⚠ CAUTION

- **Unless otherwise specified, the nut contains Multemp PS No.2 Grease (KYODO YUSHI CO., LTD.) as a lubricant.**
- **Checking and supplying lubricant**
  Check the lubricant 2 to 3 months after the ball screw is used for the first time. If it is extremely dirty, wipe off old grease and apply new grease. Then, check and supply the lubricant once every year as a general rule. However, as the service life of lubricants varies according to operating conditions and environment, adjust the intervals properly.
  When feeding additional grease (lubricant), use the same brand of grease as initially contained.
  With SC series, a central grease filler hole (M3) is provided on side surface of table, making it possible for the grease to be supplied to ball screw and guide through the filler hole.
  Supply additional grease as necessary, preferably with the interval indicated above. When adding grease, 2 dispenses by grease gun (approx. 1 to 2 cc) should be supplied.
  After supplying additional grease, operate the table to the extent of full stroke to apply the grease over the component. Wipe off excess grease attached around the central grease filler hole.
- **Do not use at high temperature over 60 celsius degree.**
  As resin is used in ballscrew actuator, use at lower temperature than 60 celsius degree. For ballscrew actuator with sensor, use at lower temperature than 55 celsius degree.

SG46	340, 440, 540, 640, 740, 840*, 940*, 1040*, 1140*, 1240*
SG55	980, 1080, 1180, 1280*, 1380*

⑤ Performance grade

P	Repeated positioning accuracy±1μm
H	Repeated positioning accuracy±3μm

⑥ Motor bracket configuration

Model	Motor bracket configuration
SG20	A0, A1, A3, A5, A6, A8, A9, AA, R0
SG26	A0, A1, A3, A5, A6, A8, A9, AA, R0
SG33	A0, A1, A2, A3, A4, A5, A6, A7, B1, B2, R0, E□, F□
SG46	A0, A1, A2, A3, A4, B0, C0, D0, R0, E□, F□, G□
SG55	A0, A1, A2, A3, A4, R0

⑦ Type of cover

N	Without cover
C	With cover
L	Low housing

⑧ Sensor

Model	Sensor
SG20	N: Without sensor S: Photo-microsensor K, E: Proximity sensor 1: For sensor rails only
SG26	
SG33	Without sensor M, Y, C, P, H, J: Photo-microsensor K, E: Proximity sensor 1, 2, 3: For sensor rails only
SG46	
SG55	

⑨ Surface treatment (Note 4)

N	Standard treatment
L	Anti corrosive black coating

⑩ Grease (Note 5)

Model	Grease
SG20	N: Standard grease S: Dust preventive KURODA S grease
SG26	
SG33	
SG46	
SG55	

⑪ Dowel pin hole

Blank	No dowel pin hole
PS	For slide block only
PR	For guide rail only
PSR	For both slide block and guide rail

(Note 1) Short slide block type (Symbol: C, D) is not available in lead 20mm.

(Note 2) For specifications of guide rail with long rails or intermediate stroke with non-standard length, consult KURODA.

(Note 3) Asterisked (*) items in the table apply only to performance grade H.

(Note 4) With standard surface treatment (Symbol: N), guide rails of SG20 and SG26 are not treated with anti corrosive coating. For SG33, SG46 and SG55, only guide rails are treated with black coating as the standard surface treatment.

(Note 5) With standard grease (Symbol: N), Multemp PS No.2 Grease (KYODO YUSHI CO., LTD.) is contained in slide block and ball screw components.

● PARALLEL MOTOR MOUNTING

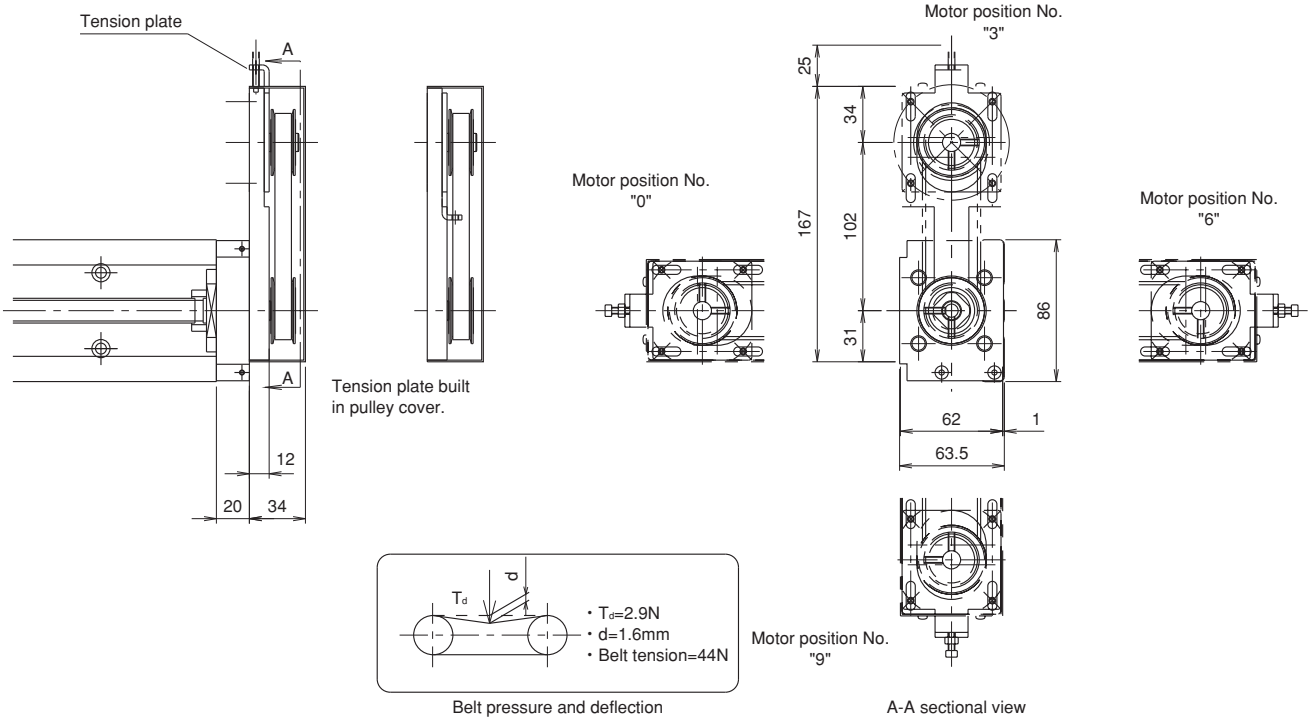
● SG46



- Pulley unit position can be adjusted at every 90 degree.
- Motor parallel mounting can be equipped with dustproof cover and sensor.
- Tension plate position can be built in pulley cover.
- The mass is 0.7kg larger than the values shown in tables on pages 35 and 37.
- Inertia moment is 1.24×10^{-5}kg・m^2 larger than the value shown in table on page 5.

(Note 1) Asterisked (*) items may be different from the values shown above, depending on applied options and usage.

HOW TO INTERPRET MODEL NO.

SE30	05	A	-	150	U	-	A1	N	N	-	N	N	-	PS
①	②	③		④	⑤		⑥	⑦	⑧		⑨	⑩		⑪

① Model ② Lead

① Model	② Lead
SE15	1, 2
SE23	2, 5
SE30	4, 5, 10
SE45	5, 10, 20

③ Slide block

Model	Slide block
SE15	A: With 1 long block B: With 2 long blocks
SE23	
SE30	
SE45	A: With 1 long block B: With 2 long blocks C: With 1 short block D: With 2 short blocks

④ Guide rail length (Note 1)

Model	Guide rail length (mm)
SE15	100, 150, 200
SE23	150, 200, 250, 300
SE30	150, 200, 300, 400, 500, 600, 700, 750
SE45	340, 440, 540, 640, 740, 840, 940

⑤ Performance grade

U	Repeated positioning accuracy±5μm
W	Repeated positioning accuracy±10μm

⑥ Motor bracket configuration

Model	Motor bracket configuration
SE15	A0, A1, A2, A3
SE23	A0, A1, A2, A3, A5, A6, A7
SE30	A0, A1, A2, A3, A4, A5, A7, B1, RN, E□, F□
SE45	A0, A1, A2, A3, A4, A5, A6, RN, E□, F□, G□

⑦ Type of cover

N	Without cover
C	With cover

⑧ Sensor

Model	Sensor
SE15	N: Without sensor K, E: Proximity sensor 1: For sensor rails only
SE23	N: Without sensor S:Photo-microsensor K, E: Proximity sensor 1: For sensor rails only
SE30	N: Without sensor M, Y, C, P: Photo-microsensor K, E: Proximity sensor 1: For sensor rails only
SE45	

⑨ Surface treatment (Note 2)

N	Standard treatment
L	Anti corrosive black coating

⑩ Grease (Note 3)

Model	Grease
SE15	N: Standard grease S: Dust preventive KURODA S grease
SE23	
SE30	
SE45	

⑪ Dowel pin hole

Blank	No dowel pin hole
PS	For slide block only
PR	For guide rail only
PSR	For both slide block and guide rail

(Note 1) For specifications of guide rail with long rails or intermediate stroke with non-standard length, consult KURODA.

(Note 2) With standard specifications of surface treatment (Symbol: N), only guide rails are treated with black coating.

(Note 3) With standard grease (Symbol: N), Multemp PS No.2 Grease (KYODO YUSHI CO., LTD.) is contained in slide block and ball screw components.

(Note 4) Dowel pin hole configuration is not available for SE15.

(Note 5) With Lubrication unit LUBSEAL specifications refer page from 118 to 119.

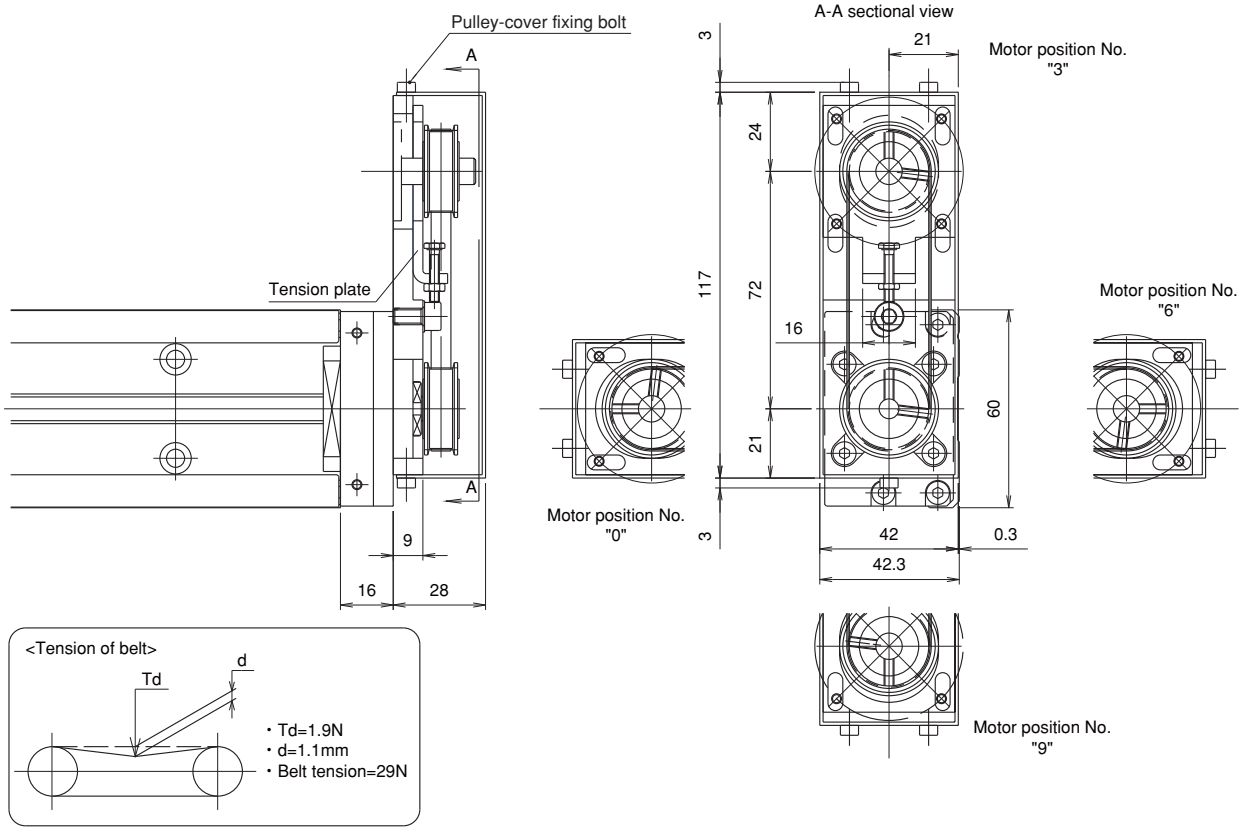
● PARALLEL MOTOR MOUNTING



- Pulley unit position can be adjusted at every 90 degree.
- Motor parallel mounting can be equipped with dustproof cover and sensor.
- Fill Motor position No. in □.
  If the pulley cover may not be removable due to restrictions arising from direction of the unit, consult KURODA for modifying positions of the pulley-cover fixing bolts (3 M3 hex socket bolts).

Mark	Pulley Inner dia.	Applicable motor	
E□	Inner dia. ϕ8	Panasonic	50 - 100W motor and so on
F□	Inner dia. ϕ8	Yaskawa	50 - 100W motor and so on
		Mitsubishi Electric	50 - 100W motor and so on
		Sanyo Electric	50 - 100W motor and so on

Fullfill the motor position No. in □.
Check the spec. if the motor can be assembled before using.

- Tension plate position can be built in pulley cover.
- Although tension plate is attached inside the cover with standard specifications, it can also be attached to outside the cover. Consult KURODA for such modification.
- The mass is 0.2kg larger than the values shown in table on page 71.
- Inertia moment is 2.22×10^{-6}kg・m^2 larger than the value shown in table on page 55.

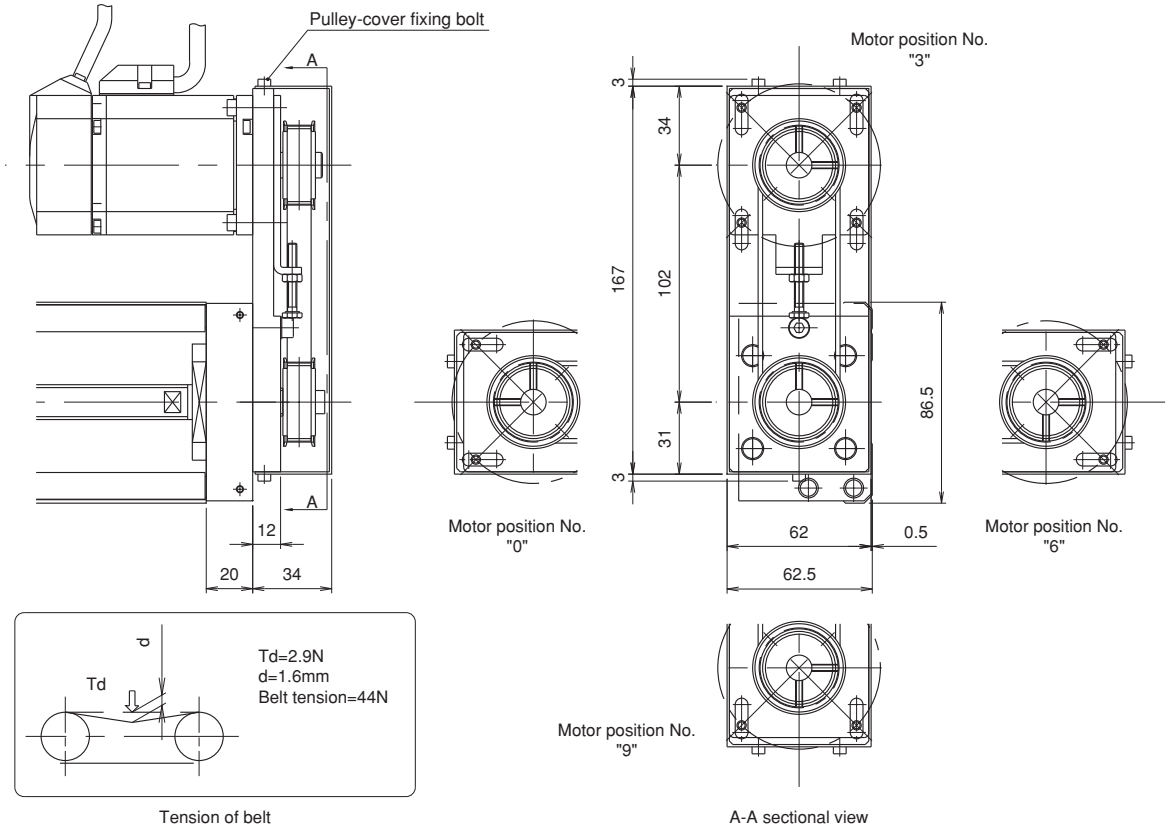
● PARALLEL MOTOR MOUNTING



Tension of belt

A-A sectional view

- Pulley unit position can be adjusted at every 90 degree.
- Fill motor position No. in □.
  If the pulley cover may not be removable due to restrictions arising from direction of the unit, consult KURODA for modifying positions of the pulley-cover fixing bolts (3 M3 cross recessed flat head machine screws).
- Motor parallel mounting can be equipped with dustproof cover and sensor.
- Although tension plate is attached inside the cover with standard specifications, it can also be attached to outside the cover. Consult KURODA for such modification.
- Tension plate position can be built in pulley cover.
- The mass is 0.7kg larger than the values shown in tables on pages 79 and 81.
- Inertia moment is 1.24×10^{-5}kg・m² larger than the value shown in table on page 55.

Mark	Pulley Inner dia.	Applicable motor	
E□	Inner dia. ϕ 11	Panasonic	200W motor and so on
F□	Inner dia. ϕ 14	Yaskawa	200W motor and so on
		Mitsubishi Electric	200W motor and so on
		Sanyo Electric	200W motor and so on
G□	Inner dia. ϕ 8	Oriental Motor Stepping Motor □60 series and so on"	

Fullfill the motor position No. in □.
Check the spec. if the motor can be assembled before using.

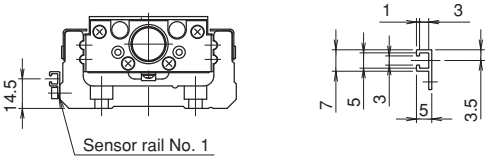
Sensor rail No. 1



SE series

KURODA JENATEC

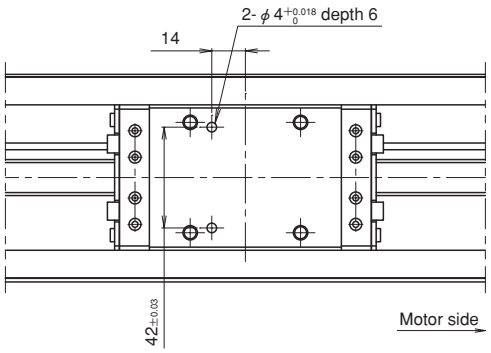
Motor bracket configuration	Type of cover	Sensor		Surface treatment	Grease		Dowel pin hole
✻✻	✻	✻		✻	✻		✻✻
A0, A1, A2, A3, A4, A5, A6, RN, E□, F□, G□	N: Without cover C: With dustproof cover	N: Without sensor M, Y, C, P: Photo-microsensor K, E: Proximity sensor 1: For sensor rails only	–	N: Standard treatment L: Anti corrosive black coating	N: Standard grease S: Dust preventive grease	–	No symbol: No dowel pin hole PS: For slide block only PR: For guide rail only PSR: For both slide block and guide rail

● DOWEL PIN HOLE

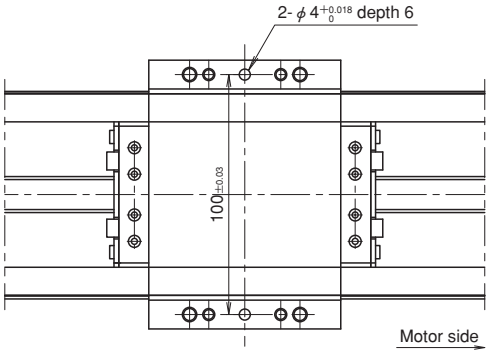
Dowel pin holes are applicable on the slide blocks with part number "PS", sub-tables "PR"or slide blocks and sub-tables "PSR". For an actuator with 2 blocks, they are on both driving-side block and driven-side block. Please note that dowel pins are not equipped.

Long block without dustproof cover with "PS"

For actuators with 2 blocks, the holes are on both blocks.

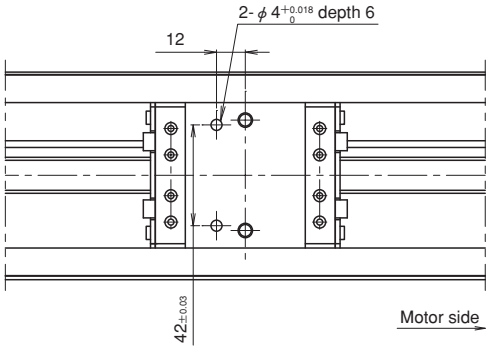


Long block with dustproof cover with "PS"

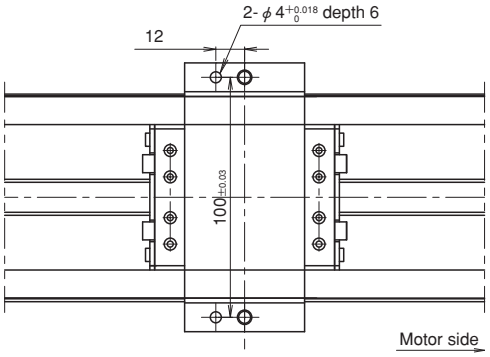


Short block without dustproof cover with "PS"

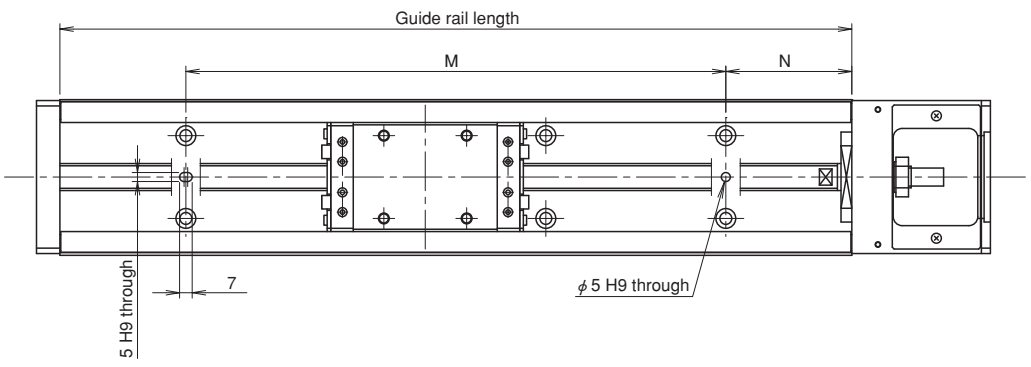
For actuators with 2 blocks, the holes are on both blocks.



Short block with dustproof cover with "PS"



Guide rail with "PR"



(Unit: mm)

Guide rail length	N	M	Dowel pin height
340	70	200	Less than 11
440		300	
540		400	
640		500	
740		600	
840		700	
940		800	

Notice: In case dowel pin is stuck out from the U-guide rail, it may interfere with and break the slide block.

● Specifications

Model No.		PM-L24	PM-Y54
	NPN output type		
	PNP output type	-	PM-Y54P
Sensing range		5mm (fixed)	
Sensing object		0.8X1.8mm opaque object	
Hysteresis		0.05mm or less	
Repeatability		0.03mm or less	
Supply voltage		5 to 24V DC±10% Ripple P-P 10% or less	
Current consumption		15mA or less	
Output		NPN output type: NPN transistor open collector Maximum sink current : 50mA Applied voltage : 30V DC or less (between output and 0V) Residual voltage : 0.7V or less (at 50mA sink current) 0.4V or less (at 16mA sink current)	
		PNP output type: PNP transistor open collector Maximum sink current : 50mA Applied voltage : 30V DC or less (between output and +V) Residual voltage : 0.7V or less (at 50mA sink current) 0.4V or less (at 16mA sink current)	
Output operation		Incorporated with 2 outputs : Light-ON/Dark-ON	
Response time		Under light received condition : 20 μs or less Under light shielded condition : 100 μs or less (Response frequency1kHz or above)	
Operation indicator		Vermillion LED (lights up under light received condition)	
Ambient illuminance		Fluorescent light : 1000 lx at the light-receiving face	
Ambient temperature		-25 to +55℃: (No dew condensation or icing allowed), Storage: -30 to +80℃:	
Ambient humidity		35 to 85% RH, Storage: 35 to 85% RH	
Voltage withstandability		1000V AC for 1 min. between all supply terminals connected together and enclosure	
Insulation resistance		50MΩ or more with 250V DC megger between all supply terminals connected together and enclosure	
Vibration resistance		10 to 2000Hz frequency, 1.5mm amplitude in X, Y and Z directions for 2 hours each	
Shock resistance		15000mm/s² acceleration (1500G approx.) in X, Y and Z directions for 3 times each	
Cable		0.09mm² 4-core cabtyre cable, 1m long	-
Mass		10g approx.	3g approx.
Material	Case	Poly Butylene Terephtalate (PBT)	
	Cover	Polycarbonate	
	Terminal	Solder plated (PM-Y54P only)

● Specifications

Model No.	NPN output type	APM-D3B1, APM-D3B1F (different-frequency type)
	PNP output type	APM-D3E1, APM-D3E1F (different-frequency type)
Sensing method		High-frequency oscillation type (unshielded type)
Rated supply voltage		DC 12/24V
Rated sensing distance		2.5mm ±15%
Usable sensing distance		0～1.8mm
Sensing object		15×15mm t=1mm Iron
Hysteresis		15% or less in sensing length
Operating voltage range		DC 10.8～26.4V(Ripple 10% or less)
Current consumption		10mA or less
Output type		NPN transistor open collector
		PNP transistor open collector
Operation mode		Normally closed (N.C.)
Control Output	Switching current	30mA or less (resistance load)
	Residual voltage	1V or less (switching current 30mA
	Output dielectric strength	26.4V
Response frequency		120Hz
Repeatability		0.05mm or less
Temperature characteristics		±15% max. for the range of -10 to +55℃ when +25℃ is taken as standard temperature in sensing distance
Supply voltage characteristics		±2% max. with 10% voltage fluctuation with rated supply voltage as standard voltage in sensing distance
Operation indicator		Lights up in orange under light received condition
Ambient temperature		−10～+55℃
Ambient temperature at storage		−25～+70℃
Ambient humidity		35～85%RH
Insulation resistance		50MΩ or more (measured by DC 500V insulation ohmmeter)
Voltage withstandability		1000V AC , 50/60Hz for 1 min. between all supply terminals connected together and enclosure
Vibration resistance		10 to 55Hz, 1.5mm amplitude in X, Y, and Z directions for 2 hours each
Shock resistance		500m/s² in X, Y, and Z directions for 3 times each
Protection		IP67 (IEC529)
Mass		10g approx.
Circuit protection		Surge absorption, reverse connection protection circuit (-S: load short protection)
Connection		Pre-leaded (oil-resistant cord: 2.5 mm O.D., 0.08 mm², 3-core, 1 m)
Case material		Polyarylate resin
Tightening torque		0.5N･m (M2.6 screw)

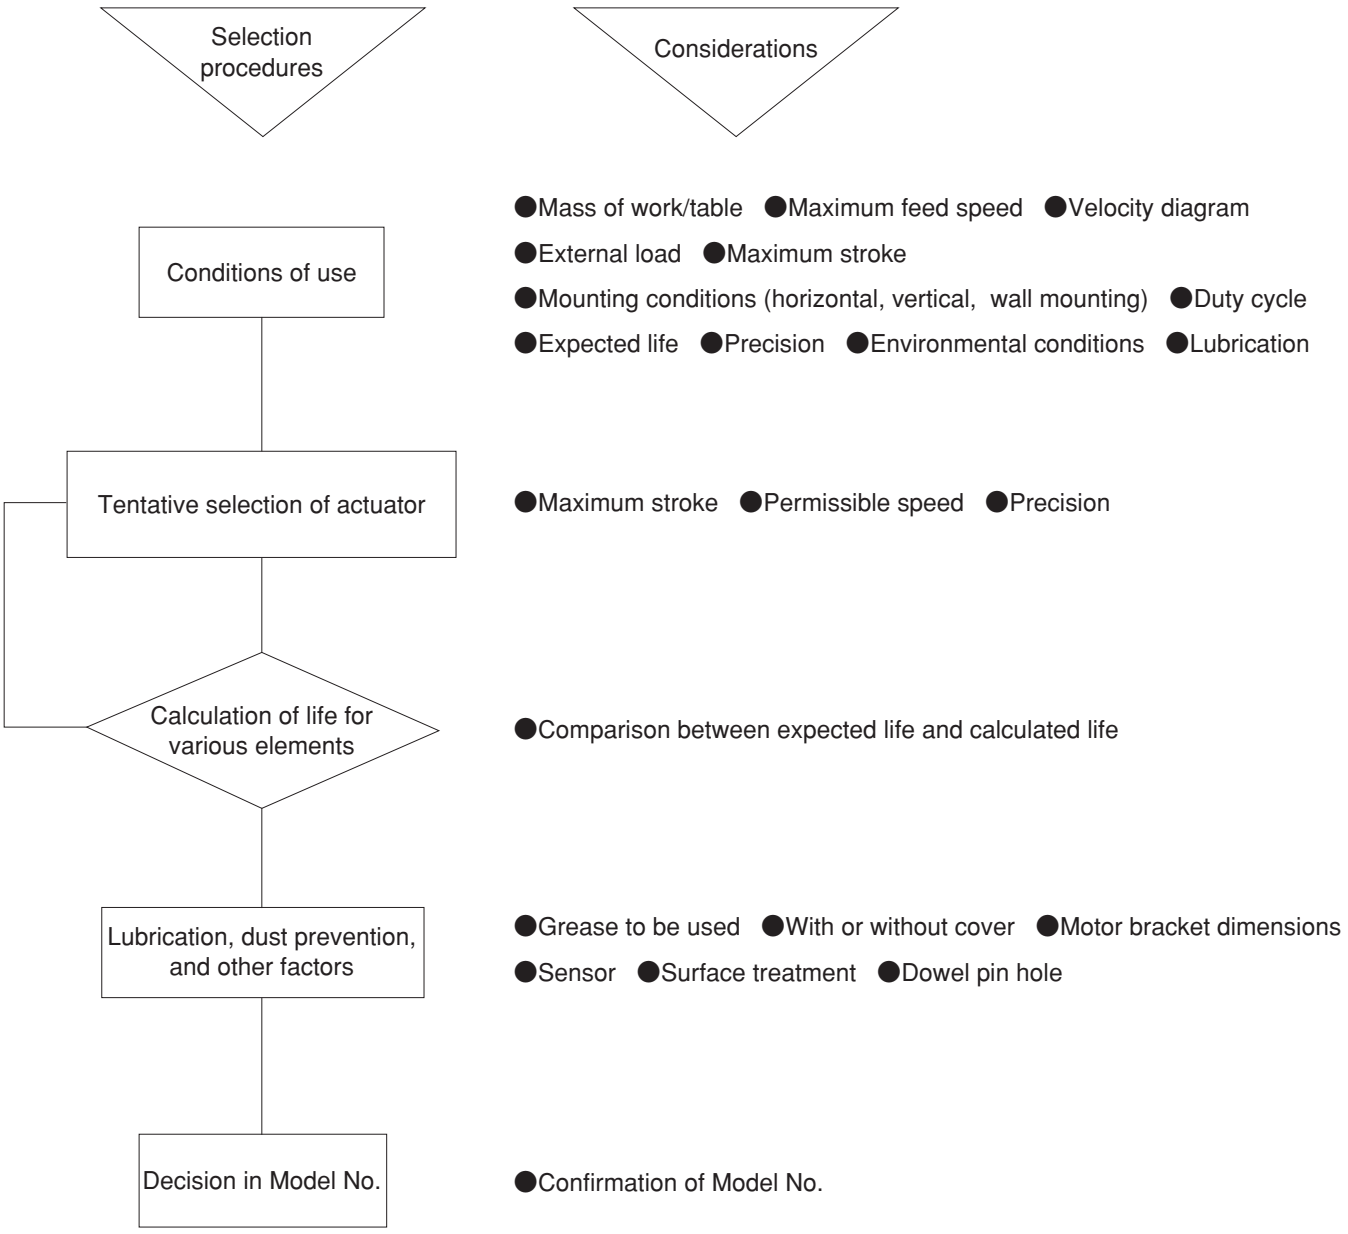
CONTENTS

TECHNICAL DATA FOR BALLSCREW ACTUATORS

BALLSCREW ACTUATOR SELECTION GUIDE

Similar to ball screw selections, there is no instant way of selecting appropriate ballscrew actuators for various purposes. The following is an example of general procedures in actuator selection, with some considerations to be made on each step and pages to refer to.



LIFE EXPECTANCY

The shortest life expectancy of among guid-rail, ballscrew and support bearing can be defined as the life expectancy of ballscrew actuators, SE, SG, and SC series.
The following formula is used to calculate the life expectancy.

LIFE EXPECTANCY OF GUIDE

Calculate the life expectancy of guide using the following formula:

$$L_G = \left(\frac{f_C}{f_W} \cdot \frac{C}{P_T} \right)^3 \cdot 50 \quad \text{——— Formula (1)}$$

L_G : Life expectancy operational length (km)
f_C : Contact factor (see Table 1)
f_W : Load factor (see Table 2)
C : Basic dynamic load rating (N)
P_T : Calculated load per block (N)

Calculation of P_T

To calculate the life expectancy using Formula (1), you need to obtain the calculated load per block (P_T) in consideration of actual moment load.
If the acceleration is high or short-stroke operation is conducted, calculate P_T in consideration of acceleration. This acceleration calculation is made for a mass loaded on SG, SE, and SC.
Obtain the calculated load in uniform motion, accelerated motion, and decelerated motion, and its average figure is used as P_T.
For the calculation of P_T, select a calculation formula according to the installation conditions.
If acceleration needs not to be considered,
$P_T = P_{TC}$ (See Formula (2), (5) and (8)) can be used for calculation. However, you can calculate only the approximate value in this formula, therefore it is recommended that you calculate the life expectancy with an ample margin.

Table 1 Contact factor (f_C)

Number of blocks to be used in contact, when single axis module is used.	Contact factor (f_c)
1	1.0
2	0.81

Table 2 Load factor (f_W)

Operating condition		Load factor (f_W)
Vibration and shock	Speed	
Zero	250mm/s or less	1.0～1.5
Small	1000mm/s or less	1.0～2.0
Large	1000mm/s or more	2.0～3.5

Table 3 Moment equivalent factor

	Ep(E2p)	Ey(E2p)	Er(E2r)
SG20**A	2.25×10^{-1}	1.89×10^{-1}	7.84×10^{-2}
SG20**B	3.98×10^{-2}	3.34×10^{-2}	3.92×10^{-2}
SG26**A	1.51×10^{-1}	1.27×10^{-1}	5.88×10^{-2}
SG26**B	2.72×10^{-2}	2.28×10^{-2}	2.94×10^{-2}
SG33**A	1.26×10^{-1}	1.06×10^{-1}	4.55×10^{-2}
SG33**B	2.20×10^{-2}	1.84×10^{-2}	2.27×10^{-2}
SG33**C	2.31×10^{-1}	1.94×10^{-1}	4.55×10^{-2}
SG33**D	3.09×10^{-2}	2.59×10^{-2}	2.27×10^{-2}
SG46**A	8.39×10^{-2}	7.04×10^{-2}	3.17×10^{-2}
SG46**B	1.56×10^{-2}	1.31×10^{-2}	1.59×10^{-2}
SG46**C	1.39×10^{-1}	1.17×10^{-1}	3.17×10^{-2}
SG46**D	2.15×10^{-2}	1.18×10^{-2}	1.59×10^{-2}
SG55**A	6.80×10^{-2}	5.71×10^{-2}	2.74×10^{-2}
SG55**B	1.35×10^{-2}	1.14×10^{-2}	1.37×10^{-2}
SE15**A	2.70×10^{-1}	2.45×10^{-1}	9.64×10^{-2}
SE15**B	4.50×10^{-2}	3.80×10^{-2}	4.82×10^{-2}
SE23**A	1.52×10^{-1}	1.37×10^{-1}	5.22×10^{-2}
SE23**B	2.54×10^{-2}	2.29×10^{-2}	2.61×10^{-2}
SE30**A	1.17×10^{-1}	9.83×10^{-2}	4.54×10^{-2}
SE30**B	1.95×10^{-2}	1.64×10^{-2}	2.27×10^{-2}
SE45**A	8.39×10^{-2}	7.04×10^{-2}	3.17×10^{-2}
SE45**B	1.56×10^{-2}	1.31×10^{-2}	1.59×10^{-2}
SE45**C	1.26×10^{-1}	1.06×10^{-1}	3.17×10^{-2}
SE45**D	2.10×10^{-2}	1.76×10^{-2}	1.59×10^{-2}
SC23**A	1.52×10^{-1}	1.37×10^{-1}	5.22×10^{-2}
SC30**A	1.17×10^{-1}	9.83×10^{-2}	4.54×10^{-2}
SC45**A	8.39×10^{-2}	7.04×10^{-2}	3.17×10^{-2}

(Note) The specifications of a model with two blocks show factors when the two blocks are used in contact.

● P_T in the case of Horizontal Movement (Horizontal Installation)

① For uniform motion (P_{TC})

$$P_{TC}=\frac{1}{n}\cdot W+Ep\cdot M_{pL}+Ey\cdot M_{yL}+Er\cdot M_{rL} \quad \text{Formula (2)}$$

② For accelerated motion (P_{Ta})

$$P_{Ta}=\frac{1}{n}\cdot W+Ep\,(M_{pL}+m\cdot a_a\cdot Z)+Ey\,(M_{yL}+m\cdot a_a\cdot X)+Er\cdot M_{rL} \quad \text{Formula (3)}$$

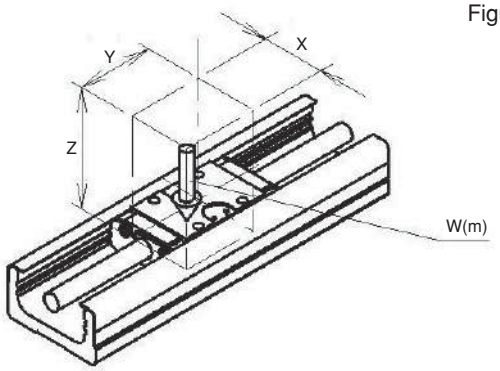
If item $(M_{pL}+m\cdot\alpha_a\cdot Z)$ or $(M_{yL}+m\cdot\alpha_a\cdot X)$ is a negative value, the value should be set to 0.

③ For decelerated motion (P_{Td})

$$P_{Td}=\frac{1}{n}\cdot W+Ep\,(M_{pL}+m\cdot\alpha_d\cdot Z)+Ey\,(M_{yL}+m\cdot\alpha_d\cdot X)+Er\cdot M_{rL} \quad \text{Formula (4)}$$

If item $(M_{pL}+m\cdot\alpha_d\cdot Z)$ or $(M_{yL}+m\cdot\alpha_d\cdot X)$ is a negative value, the value should be set to 0.

Figure 1



If a load is applied from a different direction other than W (m) in this figure, contact KURODA.

P_{TC} : Calculated load per block in uniform motion (N)
P_{Ta} : Calculated load per block in accelerated motion (N)
P_{Td} : Calculated load per block in decelerated motion (N)
n : Number of block of SG / SE / SC
W : Load (N)
m : Load mass (kg)
α_a : Acceleration in accelerated motion (m/sec²)
α_d : Acceleration in decelerated motion (m/sec²) (with a minus sign)
X : Distance from center of SG / SE / SC to center of gravity of loaded mass (mm)
Y : Distance from center of SG / SE / SC to center of gravity of loaded mass (mm)
Z : Distance from center of SG / SE / SC ballscrew to center of gravity of loaded mass (mm)

E_p : Moment equivalent factor in pitching direction (see Table 3)
E_y : Moment equivalent factor in yawing direction (see Table 3)
E_r : Moment equivalent factor in rolling direction (see Table 3)
M_{pL} : Load moment in pitching direction (N·mm)
$M_{pL} = W \cdot Y$
M_{yL} : Load moment in yawing direction (N·mm)
$M_{yL} = 0$ (The load moment is zero under this usage.)
M_{rL} : Load moment in rolling direction (N·mm)
$M_{rL} = W \cdot X$

(Note) For the moment directions, see Pages 3, 53 and 91.

● P_T in the Case of Horizontal Movement (Wall Installation)

① For uniform motion (P_{TC})

$$P_{TC}=\frac{1}{1.19\cdot n}\cdot W+Ep\cdot M_{pL}+Ey\cdot M_{yL}+Er\cdot M_{rL} \quad \text{Formula (5)}$$

② For accelerated motion (P_{Ta})

$$P_{Ta}=\frac{1}{1.19\cdot n}\cdot W+Ep\,(M_{pL}+m\cdot a_a\cdot Z)+Ey\,(M_{yL}+m\cdot a_a\cdot X)+Er\cdot M_{rL} \quad \text{Formula (6)}$$

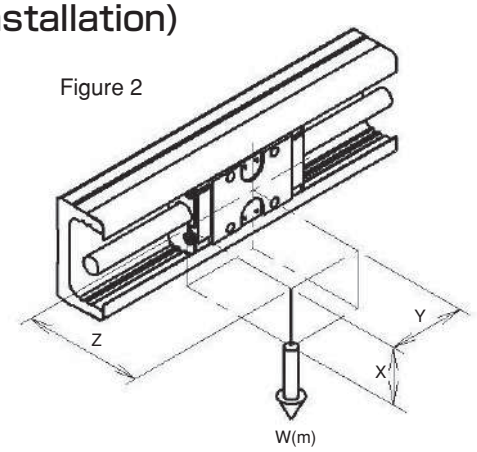
If item $(M_{pL}+m\cdot a_a\cdot Z)$ or $(M_{yL}+m\cdot a_a\cdot X)$ is a negative value, the value should be set to 0.

③ For decelerated motion (P_{Td})

$$P_{Td}=\frac{1}{1.19\cdot n}\cdot W+Ep\,(M_{pL}+m\cdot a_d\cdot Z)+Ey\,(M_{yL}+m\cdot a_d\cdot X)+Er\cdot M_{rL} \quad \text{Formula (7)}$$

If item $(M_{pL}+m\cdot\alpha_d\cdot Z)$ or $(M_{yL}+m\cdot\alpha_d\cdot X)$ is a negative value, the value should be set to 0.

Figure 2



If load is applied from a different direction other than W (m), contact KURODA.

P_{TC} : Calculated load per block in uniform motion (N)
P_{Ta} : Calculated load per block in accelerated motion (N)
P_{Td} : Calculated load per block in decelerated motion (N)
n : Number of block of SG / SE / SC
W : Load (N)
m : Load mass (kg)
α_a : Acceleration in accelerated motion (m/sec²)
α_d : Acceleration in decelerated motion (m/sec²) (with a minus sign)
X : Distance from center of SG / SE / SC to center of gravity of loaded mass (mm)
Y : Distance from center of SG / SE /SC to center of gravity of loaded mass (mm)
Z : Distance from center of SG / SE / SC ballscrew to center of gravity of loaded mass (mm)

E_p : Moment equivalent factor in pitching direction (see Table 3)
E_y : Moment equivalent factor in yawing direction (see Table 3)
E_r : Moment equivalent factor in rolling direction (see Table 3)
M_{pL} : Load moment in pitching direction (N·mm)
$M_{pL} = 0$ (The load moment is zero under this usage.)
M_{yL} : Load moment in yawing direction (N·mm)
$M_{yL} = W \cdot Y$
M_{rL} : Load moment in rolling direction (N·mm)
$M_{rL} = W \cdot Z$

(Note) For the moment directions, see Pages 3, 53 and 91.

● P_T in the Case of Vertical Movement

① For uniform motion (P_{TC})

$$P_{TC}=Ep\cdot M_{pL}+Ey\cdot M_{yL}+Er\cdot M_{rL}$$ ——— Formula (8)

② For accelerated motion (P_{Ta})

$$P_{Ta}=Ep\,(M_{pL}+m\cdot a_a\cdot Z)+Ey\,(M_{yL}+m\cdot a_a\cdot X)+Er\cdot M_{rL}$$ ——— Formula (9)

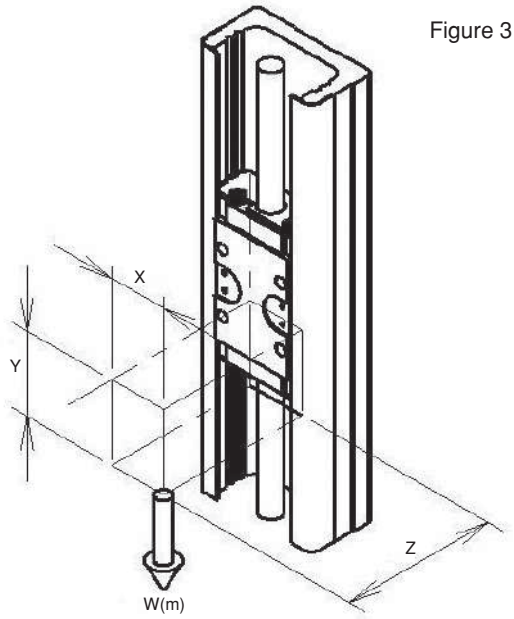
If item $(M_{pL}+m\cdot\alpha_a\cdot Z)$ or $(M_{yL}+m\cdot\alpha_a\cdot X)$ is a negative value, the value should be set to 0.

③ For decelerated motion (P_{Td})

$$P_{Td}=Ep\,(M_{pL}+m\cdot a_d\cdot Z)+Ey\,(M_{yL}+m\cdot a_d\cdot X)+Er\cdot M_{rL}$$ ——— Formula (10)

If item $(M_{pL}+m\cdot\alpha_d\cdot Z)$ or $(M_{yL}+m\cdot\alpha_d\cdot X)$ is a negative value, the value should be set to 0.

Figure 3



If load is applied from a different direction other than W (m) in this figure, contact KURODA.

P_{TC} : Calculated load per block in uniform motion (N)
P_{Ta} : Calculated load per block in accelerated motion (N)
P_{Td} : Calculated load per block in decelerated motion (N)
n : Number of block of SG / SE / SC
W : Load (N)
m : Load mass (kg)
α_a : Acceleration in accelerated motion (m/sec²)
α_d : Acceleration in decelerated motion (m/sec²) (with a minus sign)
X : Distance from center of SG / SE / SC to center of gravity of loaded mass (mm)
Y : Distance from center of SG / SE / SC to center of gravity of loaded mass (mm)
Z : Distance from center of SG / SE / SC ballscrew to center of gravity of loaded mass (mm)

E_p : Moment equivalent factor in pitching direction (see Table 3)
E_y : Moment equivalent factor in yawing direction (see Table 3)
E_r : Moment equivalent factor in rolling direction (see Table 3)
M_{pL} : Load moment in pitching direction (N·mm)
$M_{pL} = W \cdot Z$
M_{yL} : Load moment in yawing direction (N·mm)
$M_{rL} = W \cdot X$
M_{rL} : Load moment in rolling direction (N·mm)
$M_{yL} = 0$ (The load moment is zero under this usage.)

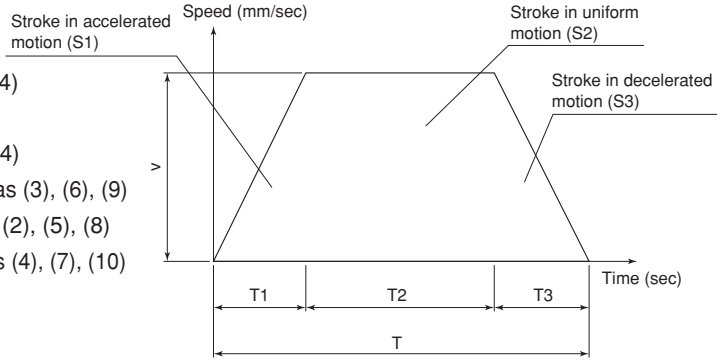
(Note) For the moment directions, see Pages 3, 53 and 91.

● Using one of the above calculation formulas according to your usage, calculate average load in each motion to obtain calculated load per block (P_T).

$$P_T=\sqrt[3]{\frac{1}{(S1+S2+S3)}\left(P_{Ta}^{\,3}\cdot S1+P_{TC}^{\,3}\cdot S2+P_{Td}^{\,3}\cdot S3\right)}$$ ——— Formula (11)

Formula 4

P_T : Calculated load per block (N)
S1 : Traveling distance in accelerated motion (mm) (see Figure 4)
S2 : Traveling distance in uniform motion (mm) (see Figure 4)
S3 : Traveling distance in decelerated motion (mm) (see Figure 4)
P_{Ta} : Calculated load per block in accelerated motion (N) - Formulas (3), (6), (9)
P_{TC} : Calculated load per block in uniform motion (N) - Formulas (2), (5), (8)
P_{Td} : Calculated load per block in decelerated motion (N) - Formulas (4), (7), (10)



● LIFE EXPECTANCIES OF BALL SCREW AND SUPPORT BEARING

The life expectancies of the ball screw and the support bearing can be calculated using the following common calculation formula shown as below. Therefore, compare the dynamic load ratings of the ball screw and the support bearing and substitute a smaller value in the formula for calculation.

$$L_a = \left(\frac{1}{f_W} \cdot \frac{C_a \text{ or } C_b}{P_a} \right)^3 \cdot \ell \quad \text{Formula (12)}$$

L_a : Life expectancy operational length (km)
f_W : Load factor (see Table 2)
C_a : Basic dynamic load rating of ball screw (N)
C_b : Basic dynamic load rating of support bearing (N)
P_a : Ave. Axial load (N)
ℓ : Ball screw lead (mm)

● Calculation of Pa

To calculate the life expectancy using Formula (6), calculate Pa in consideration of acceleration. Calculate the axial load in uniform, accelerated, and decelerated motions and its average figure is used as Pa.

● In the Case of Horizontal Movement

① For uniform motion (P_{ac})

$$P_{ac} = m \cdot W + F + F_b \cdot n \quad \text{Formula (13)}$$

② For accelerated motion (P_{aa})

$$P_{aa} = m \cdot W + F + f_b \cdot n + (m + m_b \cdot n)\, \alpha_a \quad \text{Formula (14)}$$

③ For decelerated motion (P_{ad})

$$P_{ad} = m \cdot W + F + f_b \cdot n - (m + m_b \cdot n)\, \alpha_d \quad \text{Formula (15)}$$

P_{ac} : Axial load in uniform motion (N)
P_{aa} : Axial load in accelerated motion (N)
P_{ad} : Axial load in decelerated motion (N)
μ : Friction factor (0.006)
W : Load on block (N)
F : External force (load) in axial direction (N)
f_b : Slide resistance per block (N) (see Table 4)
n : Number of blocks of SG / SE
m : Load mass (kg)
m_b : Block mass of SG / SE (kg)
g : Gravitational acceleration (9.8 m / sec^2)
α_a : Acceleration in accelerated motion (m / sec^2)
α_d : Acceleration in decelerated motion (m / sec^2)

● In the Case of Vertical Movement

① For uniform motion (P_{ac})

$$P_{ac} = (m + m_b \cdot n)\, g + F + f_b \cdot n \quad \text{Formula (16)}$$

② For accelerated motion (P_{aa})

$$P_{aa} = (m + m_b \cdot n) \cdot (g + \alpha_a) + F + f_b \cdot n_a \quad \text{Formula (17)}$$

③ For decelerated motion (P_{ad})

$$P_{ad} = (m + m_b \cdot n) \cdot (g - \alpha_d) + F + f_b \cdot n_d \quad \text{Formula (18)}$$

● Using one of the above calculation formulas according to your usage, calculate an average axial load (Pa).

$$P_a = \sqrt[3]{\frac{1}{(S1 + S2 + S3)} \left(P_{aa}^{\,3} \cdot S1 + P_{ac}^{\,3} \cdot S2 + P_{ad}^{\,3} \cdot S3 \right)} \quad \text{Formula (19)}$$

P_a : Average axial load (N)
S1 : Traveling distance in accelerated motion (mm) (see Figure 4)
S2 : Traveling distance in uniform motion (mm) (see Figure 4)
S3 : Traveling distance in decelerated motion (mm) (see Figure 4)
P_{aa} : Axial load in accelerated motion (N) - Formulas (14), (17)
P_{ac} : Axial load in uniform motion (N) - Formulas (13), (16)
P_{ad} : Axial load in decelerated motion (N) - Formulas (15), (18)

Table 4 Slide resistance per block (f_b) (seal resistance)

(Unit: N)

Model No.	Accuracy grade	
	H	P
SG20	2.3	4.9
SG26	5.4	9.8
SG33	4.4	10.2
SG46	7.4	13.3
SG55	9	16

(Unit: N)

Model No.	Accuracy grade
	U/W
SE15	2.0
SE23, SC23	2.5
SE30, SC30	2.5
SE45, SC45	7.5

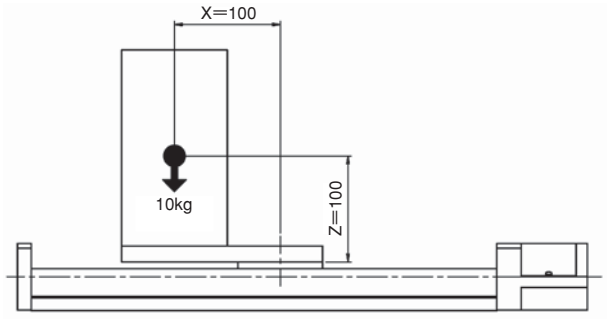
EXAMPLE OF BALLSCREW ACTUATOR SELECTION

● Linear motion robot - X-axis

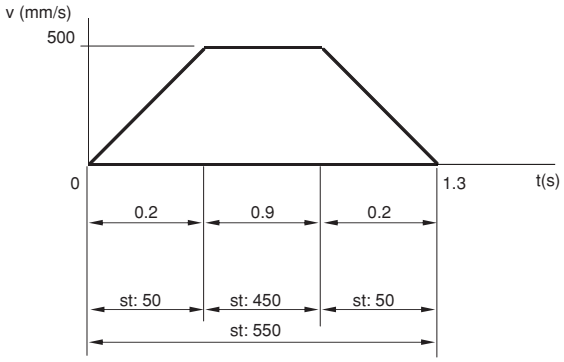
<Specifications>

Mass of work and table: M	10kg
Load distribution	See right side diagram.
Maximum stroke: st	550mm
Fast-feed speed: v	500mm/s
Acceleration/deceleration time constant: t	0.2 s
Maximum motor speed	6000min^{-1}
Orientating orientation	Horizontal
Repeated positioning accuracy	±0.01 mm or less
Expected life	30,000h

Load distribution diagram



Duty cycle model diagram



① Tentatively select SE4510A-740W-A1NN-NN in SE series, based on the conditions such as stroke and speed.

② Calculation of life expectancy

②-1. Calculating life expectancy of guide

Considering the usage with moment being loaded, average load and life expectancy were calculated in accordance with "LIFE EXPECTANCY OF GUIDE" on page 111, and they resulted in 1,274 N and 39,030 hours, respectively. The load coefficient for the above calculation was determined to be 2, based on the conditions of use.

②-2. Calculating expected life of ball screw and support bearings

Average axial load and life expectancy were calculated in accordance with "LIFE EXPECTANCIES OF BALL SCREW AND SUPPORT BEARING" on page 114, and the axial load resulted in 14.9 N and expected life of both ball screw and support bearing in over a million hours. The load coefficient for the above calculation was determined to be 2, based on the conditions of use.

③ Results of the selection

The above calculation results of life expectancies confirmed that the tentatively selected model would satisfy the required specifications. Since there is no other particular specification to be further considered, the model is selected officially.

Selected model of ballscrew actuator: SE4510A-740W-A1NN-NN

If longer life expectancy than the calculated life is preferred, make re-calculation after changing specifications, such as upgrading model size or adding extra slide block.

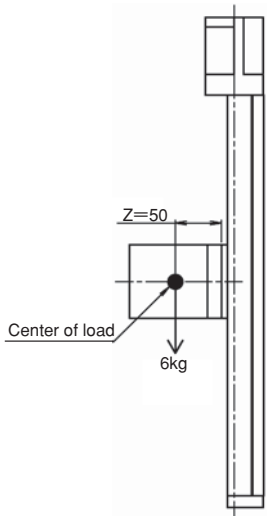
EXAMPLE OF BALLSCREW ACTUATOR SELECTION

● Lift - Z-axis

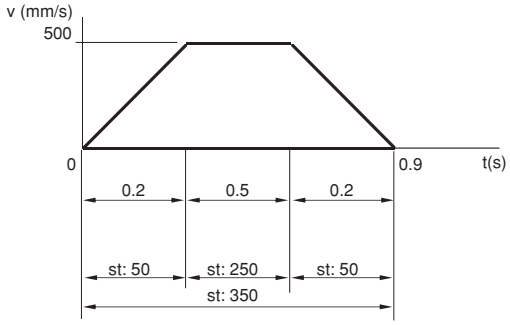
<Specifications>

Mass of work and table: M	6kg
Load distribution	See right side diagram.
Maximum stroke: st	350mm
Fast-feed speed: v	500mm/s
Acceleration/deceleration time constant: t	0.2 s
Maximum motor speed	6000min^{-1}
Orientating orientation	Vertical
Repeated positioning accuracy	±0.003 mm or less
Life expectancy	40,000h

Load distribution diagram



Duty cycle model diagram



① Tentative selection of ballscrew actuator

Tentatively select SG3310A-500H-A0NN-NN in SG series, based on the conditions such as strokes and speed.

② Calculation of life expectancy

②-1. Calculating life expectancy of guide

Considering the usage with moment being loaded, average load and life expectancy were calculated in accordance with "LIFE EXPECTANCY OF GUIDE" on page 111, and they resulted in 805 N and 17,166 hours, respectively. The load coefficient for the above calculation was determined to be 2, based on the conditions of use.

②-2. Calculating expected life of ball screw and support bearing

Average axial load and life expectancy were calculated in accordance with "LIFE EXPECTANCIES OF BALL SCREW AND SUPPORT BEARING "on page 114, and the axial load resulted in 60N and expected life of ball screw and support bearing in 44,202 and 353,620 house, respectively. The load coefficient for the above calculation was determined to be 2, based on the conditions of use.

③ Results of the selection

According to the above results of life expectancies, the life of the guide does not satisfy the life expectancy requirement. Since the ball screw and support bearing have satisfactory life expectancies, make re-calculation after changing the block on the guide. Leaving the guide rail length and required stroke as they are, change the model to SG3310D-500H-A0NN-NN.

④ Re-calculation of life

As in the previous step, average load and life expectancy were calculated in accordance with "LIFE EXPECTANCY OF GUIDE" on page 111, and they resulted in 198 N (load per block) and 146,740 hours, respectively.

⑤ Results of the re-selection

The results of re-calculation of life expectancy of the guide confirmed that the selected model would satisfy required hours of life expectancy.

BALLSCREW ACTUATOR SPECIFICATION DATA SHEET

Company Name		Date	
Department		Contact personnel	
Adress		Tel / Fax	
Name of Equipment/machine used		Location of use	
Drawing/conceptual drawing attached?	☐Yes pieces of pages	☐No	

Conditions of Use (Either unit system may be used.)

BALLSCREW ACTUATOR LUBSEAL

Lubrication Unit for Ballscrew Actuator

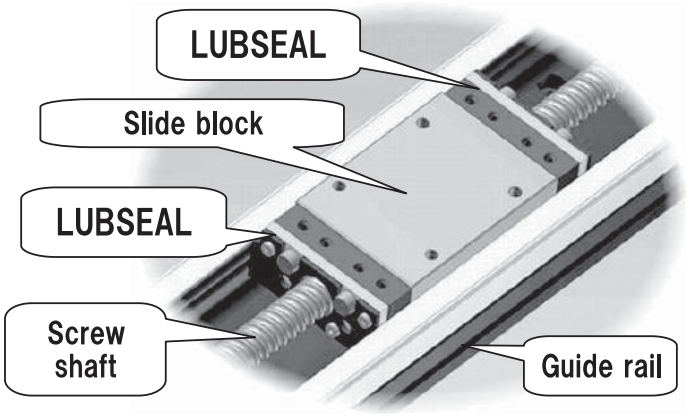
SE23 SE30 SE45 SC23 SC30 SC45

LUBSEAL is a lubrication unit which supplies a proper volume of grease to a ballscrew actuator. It contacts grooves on screw shaft and ball rolling point on guide rail. It also fits into both ends of a slide block in a ballscrew actuator compactly.
Suitable for semiconductor/liquid crystal manufacturing machines, machine tools and automobile production facilities.

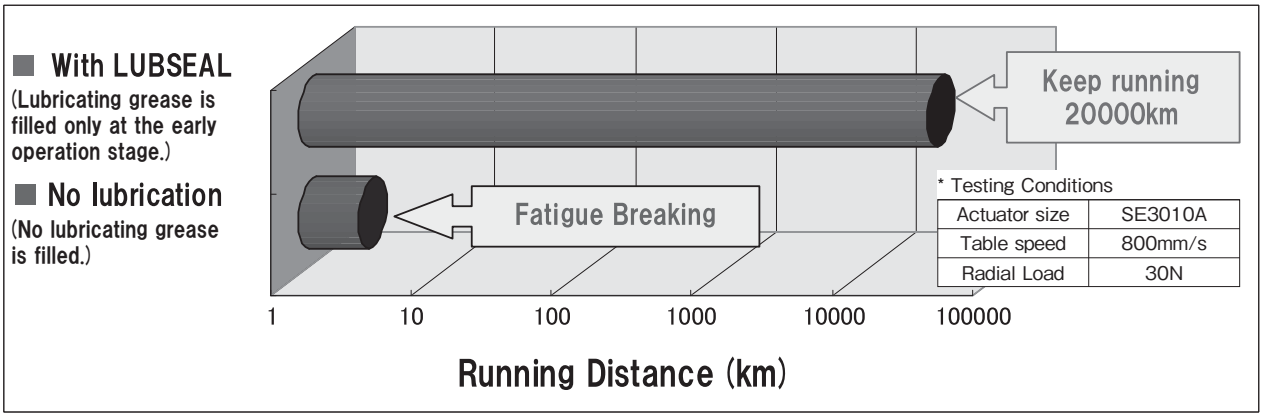
FEATURES

- Simple, neat, and compact
- Remarkably extends maintenance period
- Clean and gently for the environment

STRUCTURE



ENDURANCE TEST



Lineup

(Unit: mm)

Series	Model No.	Lead	Type of Slide Block	Applicable Guide Rail length (*)
SE	SE23	2, 5	Long Block	200-300
	SE30	4, 5, 10		200-750
	SE45	5, 10, 20	Long Block, Short Block	540-940
SC	SC23	2, 5	Long Block	200-300
	SC30	4, 5, 10		200-750
	SC45	5, 10, 20		540-940

* Because LUBSEAL are attached on both ends of a slide block, guide rail length is limited.

HOW TO INTERPRET MODEL NO.

SE series

Model NO.	Lead	Slide block		Guide rail length	Performance grade		Mortor bracket configuration	Type of cover	Sensor		Surface treatment	Grease		Dowel pin hole
SE30	10	E	–	500	W	–	A0	C	C	–	N	N	–	PS

↓

E: With 1 long block
F: With 2 long blocks
G: With 1 short block
H: With 2 short blocks

* To confirm variety of slide blocks, refer to the below-figure.

SC series

Model NO.	Lead	Slide block		Guide rail length	Performance grade		Mortor bracket configuration	Type of cover	Sensor		Surface treatment	Grease
SC30	10	E	–	500	W	–	A0	N	C	–	N	N

↓

E: With 1 long block

Maximum stroke and minimum stroke

(Unit: mm)

Model NO.	Guide rail length	Lubrication unit with LUBSEAL					
		Maximum stroke				Minimum stroke *2	
		Long slide block		Short slide block		Long slide block	Short slide block
		E: 1 pc	F: 2 pcs	G: 1 pc	H: 2 pcs	E: 1pc, F: 2pcs	G: 1pc, H: 2pcs

	840	707	–	–	–		
	940	807	–	–	–		

Dash (–) in the above table means the configuration is not available.

*1 Guide rail length 750mm for SE30 or SC30 is applied only to a 10mm lead-actuator.

*2 To use the length under minimum stroke, consult KURODA.

⚠ Operating Cautions

1. Operating temperature range is limited under 50 ℃. For operating temperature exceeding 50 ℃, consult KURODA.
2. Do not use organic solvent or kerosene.
3. In the case of anti-corrosive black coating specification, the coating film may be peeled off on the point of LUBSEAL contact.
4. Lubrication for SE series: To lubricate grooves on gide rail, pour grease for grease nipple. To lubricate screw shaft, apply grease to the shaft.
5. Lubrication for SC series: pour grease for central grease filler hole.

⚠ WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from KURODA PRECISION INDUSTRIES LTD. and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application, including consequences of any failure and review the information concerning the product or system in the current product catalogue. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.
The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by KURODA PRECISION INDUSTRIES LTD. at any time without notice.
